Topics for Remedial classes

S. No	Topic	Department			
1)	Face Muscles, Blood Supply, nerve supply, Iymphatic Drainage,	Anatomy			
2)	Temporo - mandibular Joint				
3)	Osteology of Adults Skull				
4)	Development of face, jaws and oral cavity				
5)	Nerve	Physiology			
6)	Respiratory system				
7)	Blood				
8)	Digestive system				
9)	Endocrinology				
10)	Cardiovascular system				
11)	Carbohydrates	Biochemistry			
12)	Lipids				
13)	Vitamins				
14)	Enzymes				
15)	Nutrition and diet				
16)	Salivary gland	Dental Anatomy & OralHistology			
17)	Periodontal Ligament	Orannistology			

(A Constituent unit of KLE Academy of Higher Education & Research Deemed-to-be-University u/s 3 of the UGC Act, 1956)
Nehru Nagar, Belagavi-590 010 INDIA

18)	Oral mucous membrane	
19)	General pharmacology	Pharmacology
20)	Hematinics: Iron preparations Vit: B12, FolicAcid, vit. C	
21)	Cagulants, styptics, anticoagulants and antiplatelet drugs	
22)	Corticosteroids	
23)	Dental pharmacology	
24)	Analgesics	
25)	Infection and infestation	Pathology
26)	Healing of wound	
27)	Diabetes mellitus	
28)	Intorduction to diseases of Oral Cavity andSalivary glands	
29)	Diseases of lymphnodes	
30)	General Bacteriology	Microbiology
31)	Immunology	
32)	Systemic bacteriology	
33)	Parasitology	
34)	Prosthodontics	Prosthodontics
35)	Class 2 Cavity Preparation	Pre-clinical Conservative and Endodontics
36)	Fundamental of ToothPreparation - 1	and Endodontics
37)	Fundamental of ToothPreparation - 2	

(A Constituent unit of KLE Academy of Higher Education & Research Deemed-to-be-University u/s 3 of the UGC Act, 1956)
Nehru Nagar, Belagavi-590 010 INDIA

Abstract

Aim: To assess the oral health practices and the prevalence of dental caries, and periodontal disease among transgenders.

Methods and Results: The study was conducted on a sample of 180 participants from the transgender community in Belagavi district over a course of two months. A trained and calibrated examiners recorded oral health status according to WHO dentition status and treatment needs (1997) and Community Periodontal Index (CPI) under the supervision of the subject expert. Chi-square test, spearman's rank correlation coefficient test, multiple linear regression and logistic regression were applied. The statistical significance was set at $p \le .05$ for all the tests. The prevalence of dental caries and periodontal disease among transgenders was 72.2% and 92.2%, respectively. A positive linear correlation and a significant relationship was found between the oral

-	Describe as explain Cardiac cycle events/phases of
#	Human heart.
-	
	At nest, the healthy adult heart is likely to bed at a
	nate of 60-90 b.p.m. During each heartbeat, or cardiac
	reate of 60-90 b.p.m. During each heartbeat, or cardiac cycle, the heart contracts (systole) and then relaxes
	(diastole).
	Each cycle lasts about 0.8 second and consists op:
	atriale systole - contraction on the atria.
	· Ventricular systole - contraction of the ventricles.
	· Complete cardiac diastole - nelaxation of the attic
	and ventricles.
	It does not matter at which stage of the cardiac cycle
	a description starts. For convenience the period when
	the atria are filling has been chosen.
	The atma are continually filling with blood grom
	the superior and inserior venue cavae (into the night
	atmium) and the pulmonary veins (into the legt atmium
	As pressure mises in the atria the atrioventroicular
	valves are pushed from open and blood glows
	passievely into the ventricles, helped by gravity is
•	the thorax is upright. Up to 70% of ventricular filling
	can be accomplished without any atrial contraction
	at all.
	The SA node triggers a wave of contraction
	that exprendes ever the myocardium of both atria.
	1. The object and completing ventricular
•	gilling (atrial systole 0.1 second). When the electric impulses reach the AV node it is slowed down,
_	impulses reach the AV node it is slowed down,
ĺ	

	delaying atrioventricular transmission. This delay
	means that the mechanical result of atriato
-	atrial stimulation, atrial contraction, lags behind
	the electroical activity by a praction of a second.
	This allows the atria to finish emptying into the
	ventroicles before the ventroicles begin to contract.
	After this brief delay, the AV node triggers its
	own electrical impulse, which quickly espreads to the
	ventricles ventricular muscle via the AV bundle.
	the bundle branches and Purkinje fibres. This
	results in a wave of contraction that sweeps upwards
	from the apex of the heart and across the walks
	of both ventricles, pumping the blood into the pulmonary
	centery and the acorta (Ventricular systole 0.3 second).
	The high tonessure generated during ventricular contraction
	genres the amioventricular values to close, preventing
	backgloss of blood into the atria.
	Contraction of the ventricles is followed by complex
	cardiac diastole, a period of 0.4 second, when

Contraction of the ventricles is followed by complex candiac diastole, a period of 0.4 second, when atma and ventricles are relaxed. During this time the myocardium recovers, ready for the next heartbeat, and the atma regill, ready for the next eycle.

The valves of the heart and those of the great vessels open and close, according to the pressure within the chambers of the heart. The atrio-

×	ventricular valves open during atrial tiling and
	systole because pressure within the chamber
	in the atria is higher than in ventricles when
	the ventricles contract, there is a napid increase
	in the ventricular pressure, and when it mises above
	atrial pressure the atrioventricular values close.
	When the ventricular pressure rises above that in
	the pulmonary antery and in the aonta, the
	juilmonary and agric values open and blood glows
	into these vessels. When the ventricles nelax and
	the pressure within them pulls, the neverse,
	process occures. First the pulmonary and aprilic values
	close, then the atmoventmicular values open and the
	cycle begins again.

Assignment G.N. MAMAN GOULDA NA0122023 Phaemacentical Analysis B.PHARM-1st JEM Weite their characteristics alonguith examples in détail. A perimany standard is a ereagent that is extoremely pure & stable used to perpare standand solutions. A secondary standard is a standard that is perspared in the laboratory for a specific analysis. They are perspared borom primary standand. characteristics of primary standard: · doss suactine · Do not evequive fuither puvification · Non-hygeroscopic · Purified, devied, easily anailable · High molecular weight compound reduces weighing · Perimacy standard should be dissolved in solution · About 99.98.1. of purity Characteristics of secondary standard: · Not very pure · comparatively more eveactive · dess stable in quantitative determination. · 9t is hygeroscopic in nature · It is usually standardized against a poimacy standaud.

Okalic acid is considered as perimaen standard. Deunciple -COOH 100H + 2 NaOH -> 100Na + 2H20 COONa Preparation of 0.1N onalic acid-C2H2O4.2H2O -> lyeram equivalent weight = Moleculaer tweight = 126 = 63gm acidity 639 of oralic acid = 1000ml = IN oralic acid 639 of oralic acid = 1000ml = 0.1N oralic acid Weigh accurately 63 gm of oxalic acid & dissolve in 1000 ml of distilled water to get IN onalic acid. Theoreforre, to get 0.1N onalic acid solution dissolve 6.39 of oxalic acid in 1000ml of water. Standaudization of NaOH -Pipette out exactly comt of oxalic acid into a conical blask 4 add 1-2 decops of phenolphthalein indicator 4 titrate against standard solution of NaOH filled in the buriette. Follow the same perocedure 2 times to get the constant ereading 4 observe the end point of titeration & note down the bevielle readings. Pink colour will appear at the end point.

flow to calculate 0.1N HCI. IN HCI - add 36.46 gm of HCI in 11 of water (Molan mass of HCI = 36.46 g/mole) 36.46 g of HCI is equivalent to 30.67 ml of HCI (Volume = Mass / Density = 36.46/1.19 = 30.67) Density of HCI is = 1.19 g/ml percent concenteration of most conc. HCI is 37.5%. . 30.67 ml of HCI is equal to = (30.67) x (100/37.5) = 81.8 ml HCI . Hence, to perepase IN HCI - add 81.8 ml of HCI in 1000 ml of water. · To make 0.1N HCt-add 8.18 ml HC1 in 1000 ml of water. How to calculate 0.1N NaOH. Molecular meight of NaOH = 409 gram equivalent meight = Molecular meight = 40 = 409 To make IN solution, dissolve 409 of NaOH in water to make volume 1 liter. For 0.1N solution, 49 of NaOH per litere is heeded.

Ilow do you perpare 0.1 N 42804? 10.1N of H2SO4 means, we have to add 0.1 equivalent of H2SO4 to water & make the volume of solution upto 11 by adding distilled water. Since, equivalent weight = weight of one equivalent of H2SO4 = 4.991eq. Hence, 0.1N of H2SO4 will weigh = 4.9 gm Hence, by adding 4.9gm 42504 to water & making the solution upto 1000 ml use get 0.1N solution of H2SO4. How do vue perépase 0.11 Na2 CO3? Nazcoz is used as peimacy standard for alkali because it is obtained in pure state Equivalent meight = (23X2+12X16+3)/2 of Na₂CO₃ = 53gm So, to people 1000 ml of IN Na2 CO3 solution, amount of Na2 CO3 evequired will be 539 m of Na2CO3 dissolved in 1000 ml of water 4 for 0.1 N Na2co3, 5.39m of Na2co3 is dissolved in 1000ml of water How do me perpare 0.1M HC1? - To peopage 0'1M solution of HCI Molacity = No. of moles of HCI dissolved in 1L of H20 M=n, V= Volume of solution N=0.3 0.1= 1

- Define complemation List the types of complemation write the detail of one of inclusion complen

Dwoite a note on spreading co-expicient

=) To Understand streading, we have to know about the work of cohesion and odhesion

Suffose we have a tube of any fure liquid whose Cross sectional area is 1cm^2 If a force is alflied on the liquid tube to selarate in two lasts them the work done is called work of Cohesian Thus, it will be equal to the surface tension (3.) times the amount of new area (reated. Since it is divided in to the parts of and

Since it is divided in to two parts of cm2 is created and work of cohesion (wc) will be equal to (27,1) of wc=27,

If a force is allied to cause the liquids to servate we have done three things which have been taken place while servating the tube of two

If a force is alllied to cause the 12 wids to selarate we have done three things and the work done is caused the work of Adhession

DR.BHASKAR KURANGI Department of Pharmaceutics KLE College of Pharmacy, Belagavi. 1) Write a note on spreading coefficient: when a deop of aleic and is placed on the senface of water it will spread as a film. It the spreading is sportaneous, me surface five energy of the system is reduced.

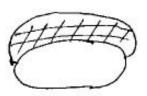

The spreading of liquids can be analysed by considering the cohesive & adhesive forces operating between the molecules.

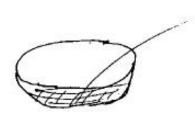

MORK OF COHESIONS-

It is the energy ocquered to seperate the nuclecules of the spreading liquids , say alicacid. Then is no "Interpretal tension when the eliqued alone is congidered cohesime forces are alone operating when a hypothen tical aplander is doubted hue new neuface are created.

Work of wheston = Wc = 28L V2 = surface tension of liquid.

Remedial Measures for Slow Learners

The slow learners in Pharmaceutical Microbiology subject were identified based on the marks secured in IA1 exam and on basis of pace of understanding. Appropriate remedial classes (Extra Classes) were conducted. Student was counseled regularly and was given the required study material. They were informed about self-learning resources and the importance of self-study. Apart from remedial classes they are also given with assignments, encouraged to view short microbiology subject videos, were given model question and answer papers.

Benefits of Self learning . Learning at convenient pace, Develops ownership of learning Driving force to have more & roose focusing on areas of evernet, may help to reduce terings of tro-adon, trustration, assety When, how long to study or whether to re-study, · Learning of new things and new skills, Better insights into learning surviviry is orggored by self-passed horning stroking deep reserver and on the sugmenting creative shifts, more opportunities to have dissper understanding and experience of tree-ridge Freedom to use various models of learning E, Missming Elearning through streaming channels, naturals, books, podicids, webtrers, steamens. pols, activity walls, soft-learning through quitzes. PDPs, assignments, asc Stress-free meaningful learning process have time management problem destification & solving skills. - Keep learners mutuated pyramon, self-ducylined self-prisoned, and target-driented. Improves self-estrom and self-reflection Learners demonstrate greater awareness

Self-increes, are more focused dealing commitments, in handling dates, responsibilities,

Model Pharmaceutical Microbiology: Theory Question Bank given

Classify bacteria on the basis of nutritional requirements and add a note on raw materials used for preparation of culture media.

Define and classify culture media. Mention salient feature of each media along with an example

Draw an ultra-structure of typical bacteria. Write composition and functions of its organelles

Define and classify bacteria. Explain different methods of measurement of bacterial growth

Enlist methods used for total and viability counting bacteria. Describe any two methods of total counting

What are Koch's postulates and how did they influence the development of microbiology

Write a note on isolation and maintenance of pure cultures of bacteria.

Explain in detail the nutritional requirements for cultivation of bacteria

Discuss important milestones in the history of pharmaceutical microbiology

Discuss contributions of Louis Pasture, Alexander Fleming and Paul Elrich to Microbiology

Write the concept of spontaneous generation

Classify bacteria on the basis of morphological features. Add a note on composition and functions of cell wall

Classify bacteria on the basis of oxygen, pH and temperature requirements

Classify bacteria on the basis of nutritional requirements

Write a note on cultivation of anaerobic bacteria

Describe any two methods of viability counting

Describe any two methods of total counting

Write a note on filter membrane method of counting bacteria

List out the major divisions of microbial world with suitable examples

Define microbiology and its applications

Write a note electron/dark field microscopy

List out the different types of microscopy and their salient features

Explain the enumeration of bacteria

Describe briefly the techniques of preservation of microbial cultures

Add a note on principle and procedure of Gram's staining technique

Write briefly on various techniques used for identification of bacteria with emphasis on Biochemical tests

Explain the principle, applications, merits and demerits of moist heat sterilization

Explain the mechanism of action, procedure, applications and factors affecting sterilization using ethylene oxide

Explain the source, mechanism of sterilization, merit, demerits and applications of sterilization using Radiations

Describe different staining techniques for identification of bacteria

Classify different sterilization methods. Add a note on sterility test methods

Write principle and procedure of Acid-fast staining

Explain IMViC tests used for identification of bacteria

Explain MR-VP tests used for identification of bacteria

Write different methods of motility testing

Write the procedure, merits and demerits of membrane filtration

Write the merits and demerits of different sterilizing filters

Write the procedure, merits and demerits of ethylene oxide sterilization

Explain the principle involved in autoclaving

What are sterilization indicators? Mention indicators used for various sterilization methods

Explain the mechanism of sterilization and heat transfer by hot air oven

Write the production, mechanism of action, demerits and applications of UV radiations

Write a note on heating with bactericide

Explain the importance of sterilization of pharmaceutical products

Mention the role of each chemical used in gram staining

Differentiate between gram positive and gram negative bacteria

What are membrane filters and what type of liquids are sterilized by using membrane filters

Explain Pasteurization and Tantalization

Define the terms sterilization, disinfection, antiseptics and sanitation

Write a note on Sterilization Indicators

Define the terms Z-value, D-Value, F VALUE

Brief about different types of staining dyes

Describe steps involved in replication of virus

Describe the steps involved in sterility testing; add a note on its interpretation

Explain different factors affecting disinfection

Explain different methods for evaluation of bacteriostatic activity

Describe methods of reproduction in fungi

Write a note on cultivation of virus

Discuss about merits and demerits of viral cultivation techniques

Write about classification of virus

Describe Redial Walker's test. List out the merits and demerits of the test

Define and classify disinfectants giving examples. Add a note on their mechanism of action

Outline mechanism of action for each class of disinfectant

Write classification, mechanism of action and uses of phenolic disinfectants

Explain the mechanism of action and uses of aldehyde disinfectants

Write classification, mechanism of action and uses of halogens as disinfectants

Write about sampling technique of sterility testing

Write the procedure of Redial Walker's co-efficient test

Explain a test for evaluation of bactericidal activity of a disinfectant

List out the properties of an ideal disinfectant

Enumerate various methods for the evaluation of bactericidal agents. Explain the procedure for determination of Phenol-Coefficient

What are the factors that influence the action of disinfectants?

Write a note on continuous and synchronous growth, Rideal walker coefficient

Explain the Pharmaceutical significance of bacteria, fungi, algae and viruses

Describe the principle and significance of 'Sterility Test'.

Write a note on official methods of Sterility testing of pharmaceuticals

What are Viruses? Explain different methods of cultivation of virus

Define virus and write the morphological aspects of virus

What are the salient feature of virus?

Explain steps involved in replication of virus

Write morphology, classification, replication and cultivation of fungi

What are the factors affecting disinfectants, Explain in detail

Write the methods evaluation of bacteriostatic and bactericidal agents

Explain the method of sterility testing of ophthalmic products according to IP/BP/USP

Explain the method of sterility testing of solids/liquids according to IP/BP/USP

Explain designing of aseptic area

Write principle and method of microbiological assay of penicillin by cup plate method

What is MIC? Explain the method for its determination

What is the importance of aseptic area in pharmaceutical manufacturing? Add a note on major sources of contamination in aseptic area

How microbial contamination in pharmaceutical products assessed?

Write principle, construction and working of laminar flow bench

What are clean rooms and how they are classified?

What are the sources of contamination in clean rooms?

How the clean room and aseptic rooms are evaluated

Explain the environmental control of sterile pharmaceutical production

Discuss different types of Laminar flow equipments

Explain the antimicrobial sensitivity test

Write the different types of spoilage

Explain different sources and types of microbial contaminants and methods to assess them

How pharmaceutical products are preserved

Write evaluation of microbial stability of pharmaceutical formulations

Define cell culture and its applications in pharmaceutical industry and research

What are the measures to be taken to maintain aseptic environment in the microbiology Lab?

Write a note on various factors affecting spoilage of pharmaceutical products

How pharmaceutical products are protected from microbial contamination

Discuss physiochemical deterioration of pharmaceuticals

Define and classify preservatives

List out various pharmaceutical ingredients susceptible to microbial attack

How do you assess the microbial contamination of pharmaceutical products?

What are the sources and steps to avoid microbial contamination of pharmaceutical products?

Write a note on evaluation of preservatives

Discuss various applications of cell culture

How animal cell cultures are cultivated and preserved

Brief about different types of animal cell culture

Representative Model Pharmaceutical Microbiology: MCQ Question Bank given (150)

1	Who is considered as Father of	Louis Pasture	Robert Koch	Paul Erlich	Alexander
	Bacteriology				Fleming
2	Alexander Fleming developed	Streptomycin	Penicillin	Gentamycin	Amoxicillin
3	Sterilization process was described	Alexander	Robert Koch	Louis Pasture	Edward Jenner
	by	Fleming			
4	Paul Ehrlich established	Agar technique	Sterilization	Culture	Modern
			process	technique	Chemotherapy
5	Robert Koch is called	Father of	Father of	Father of	Father of
		bacteriology	microbiology	Virology	Mycology
6	Who demonstrated that open tubes of broth remained free of bacteria when air was free of dust	Spallanzani	John Tyndall	Francisco Redi	Pasteur
7	Small pox vaccine was first discovered by	Robert Koch	Louis Pasteur	Lister	Edward Jenner
8	Antiseptic surgery was discovered by	Joseph Lister	Ernest Abbe	Pasteur	Beijerink
9	Alkaliphiles grow at pH value between	1 to 6	6 to 9	1 to 11	7 to 12
10	The main feature of prokaryotic	Absence of	Absence of	Absence of	Absence of protein
	organism is	locomotion	nuclear envelope	nuclear material	synthesis
11	The functions of plasmid are	DNA replication	Protein	Cell wall	Antibiotic
			synthesis	synthesis	resistance
12	The bacterial cells are at their metabolic peak during	Lag phase	Log	Stationary	Decline
13	Tumour inducing plasmids are extensively used in production of	Avirulent phases	Single cell proteins	Transgenic plants	Nitrogen fixing bacteria
14	An organism that is osmophilic and has a specific requirements for sodium chloride resembles	Halophile	Basophile	Barophile	Xerophile
15	The bacterial pili mainly contain	Carbohydrates	Lipids	Proteins	Minerals
16	Bacteria multiply by	Spore formation	Simple binary fission	Conjugation	Gametes
17	The group of bacteria which deopends on organic sources in	Chemotrophs	Phototrophs	Heterotrophes	Organotrophs

	nature for their energy				
	requirements are called				
18	The wonder drug of second world war is produced by	Algae	Fungi	Bacteria	Plants
19	Which one of the following bacteria has found extensive use in genetic engineering work in plants?	Clostridum septicum	Xanthomonas oriza	Bacillus coagulens	Agrobacterium tumefaciens
20	Acridine dyes are more effective against	Gram positive	Gram negative	Ricke Hsia	Mycoplasma
21	Example for spirochete is	Gonococci	Strphylococci	Treponema pallidum	Streptococci
22	Teichoic acids and Teichuronic acids are found in	Gram positive bacteria	Gram negative bacteria	Fungi	Protozoa
23	Amphitrichous flagella is	Surrounded by lateral flagella	Single polar flagellum	Cluster of polar flagella	Single flagellum at both cell poles
24	An example for monotrichous flagellum	Pseudomonas aeruginosa	Staphylococcus aureus	Salmonella typhi	E.Coli
25	Gram positive bacteria contains	Thin wall of peptidoglycon layer	Thick wall of Does n		Contains only lipid layer
26	The main function of a bacterial capsule is	Reservoir of energy	Acts as a semi permeable layer	Avoids drying of bacterial cell wall	Centre for protein synthesis
27	An example for gram negative bacteria is	Bacillus Anthrax	Clostridium tetani	E.coli	Cornybacterium diphtheria
28	Endospores contains	Calcium dipicolinic acid	Potassium dipicolinic acid	Sodium dipicolinic acid	Magnesium dipicolinic acid
29	A facultative anaerobic is	Only grow anaerobically	Only grow in the presence of O ₂	Ordinarily an anaerobe but can grow with O ₂	
30	Identify the obligate anaerobes	Salmonella	Vibrio cholera	C. tetani	Sarcinae
31	The cell wall deficient form of bacteria is	Mycoplasma	'L' form	Protoplast	Spheroplast
32	The differences between Gram positive and Gram negative bacteria is shown to reside in the	Cell wall	Nucleus	Cell membrane	Mesosomes
33	A culture medium the exact composition of which is not known was called as	Simple	Complex	Defined	Natural
34	Peptone water medium is an example for	Synthetic medium	Semisynthetic medium	Differential medium	None of these
35	In the medium other than nutrients, if any substance is used in excess, that medium is called as	Enriched medium	Special medium	Enrichment medium	Synthetic media
36	Example for indicator medium is	Nutrient Agar	Nutrient broth	Simmons Citrate	Czapeck-dox medium

Q1. MCQ

Q2. Draw an ultra-structure of typical bacteria. Write composition and functions of its organelles

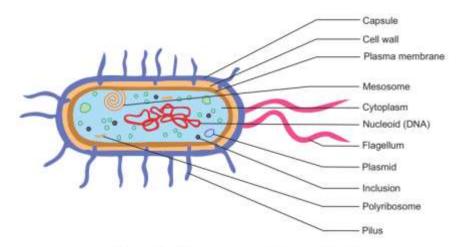

Figure 1.9: Ultrastructure of a bacterial cell

Cell Envelope - The cell envelope is made up of two to three layers: the interior cytoplasmic membrane, the cell wall, and an outer capsule (in some species of bacteria). Capsule - protective covering made up of polysaccharides (complex carbohydrates). Capsules keep the bacterium from drying out and to protect it from phagocytosis (engulfing) by larger microorganisms.

Cell Wall - Each bacterium is enclosed by a rigid cell wall composed of peptidoglycan, a protein-sugar (polysaccharide) molecule. The wall gives the cell its shape and surrounds the cytoplasmic membrane, protecting it from the environment. It also helps to anchor appendages like the pili and flagella. It is responsible for keeping the cell intact prevent from bursting, when there are large differences in osmotic pressure between the cytoplasm and the environment. Cell wall composition is one of the most important factors in bacterial species analysis and differentiation

Cytoplasm - The cytoplasm, or protoplasm, of bacterial cells is where the functions for cell growth, metabolism, and replication are carried out. It is a gel-like matrix composed of water, enzymes, nutrients, wastes, and gases and contains cell structures such as ribosomes, a chromosome, and plasmids. **Cytoplasmic Membrane** - A layer of phospholipids and proteins, called the cytoplasmic membrane, encloses the interior of the bacterium, regulating the flow of materials in and out of the cell. This is a structural property of bacteria, a barrier that allows them to selectively interact with their environment. **Flagella** - Flagella (singular, flagellum) are hair like structures that provide a means of locomotion for those bacteria that have them. Nucleoid - The nucleoid is a region of cytoplasm where the chromosomal DNA is located. It is not a membrane bound nucleus, but simply an area of the cytoplasm where the strands of DNA are found. Pili - Many species of bacteria have pili (singular, pilus), small hair like projections emerging from the outside cell surface. **Ribosomes** - Ribosomes are microscopic "factories" found in all cells, including bacteria. They translate the genetic code from the molecular language of nucleic acid to that of amino acids—the building blocks of proteins..

Q3. Describe steps involved in replication of virus

The virus life cycle could be divided into six steps: attachment, penetration, uncoating, gene expression and replication, assembly, and release. Entry: Entry involves attachment, in which a virus particle encounters the host cell and attaches to the cell surface, penetration, in which a virus particle reaches the cytoplasm, and uncoating, in which the virus sheds its capsid. Attachment: It is the first step. Attachment is a specific binding between viral capsid proteins and specific receptors on the host cellular surface. This specificity determines the host range of a virus. The virus attaches to the cell membrane of the host cell. It then injects its DNA or RNA into the host to initiate infection. In animal cells these viruses get into the cell through the process of endocytosis which works through fusing of the virus and fusing of the viral envelope with the cell membrane of the animal cell and in plant cells it enters through the process of pinocytosis which works on pinching of the viruses. Uncoating: Cell enzymes (from lysosomes) strip off the virus protein coat. This releases or renders accessible the virus nucleic acid or genome. Following the uncoating, the naked viral genome is utilized for gene expression and viral genome replication. Transcription / mRNA production: For some RNA viruses, the infecting RNA produces messenger RNA (mRNA), which can translate the genome into protein products. For viruses with negative stranded RNA viruses are produced by transcription then translation. The mRNA is used to instruct the host cell to make virus components. The virus takes advantage of the existing cell structures to replicate itself. Synthesis

DISINFECTANIT

Disinfection is the process of destruction or removal of microorganism and reducing them to a level not hormful to health.

-> Disinfectant generally kills the sesitive vegetable cells but not the heat-resistant endospores.

-- Chemical agent is known as disinfectant.

- Object is animate (live) such as a human body tissue, the chemical is known as an antiseptic.

Disinfectant are usually bocteriocidal but occasionally they may be bocteristatic.

-- Chemical agents are mostly common used as disinfectant.

'--- Example: - chlorine

Acid and Alkali

Bromine

Iodine

Assignment -I.
Megha.R. Kurabet.
NA0121029.

- ¿ etnimal cell culture :-

- * The animal cell culture is a technique in which cells obtained from animals, grown and maintained in a suitable medium.
- * The culture produced by the cell or tissue taken from an organism is called as primary culture.
- * The Sequence of culture obtained from the first Subcaltivation of the primary culture is called 'cell line'
- * The first attemp to grow animal cells in culture is attributed to gross Harison in 1907. The was able to cultivate prog embryonic nerve cells using the honging drop technique.

Growth of Animal Cell in Culture :-

- Design of animal cell culture media is more difficult than that of microorganism and plant cultures.
- well and genowth.

Student centric methods for Third year B. Pharm 2022 (Vth SEM)

Student-Centric methods used for enhancing learning experiences subject wise

Subject: Industrial Pharmacy-I

To facilitate the learning for students who are slow with respect to understanding and recall of subject contents remedial classes were conducted on specific topics which was followed with a quiz conducted using google forms on the same day. Students were made to prepare flow charts tables, schematic diagrams for process, classification/types for simplified learning.

Class: V Semester_ - III Year (2022)

Industrial Pharmacy - I

Quiz for facilitating learning

Disintegration test

By: Amrut

Reg No: NA0120006

Disintegration testing determines the time required to the breaking of tablets when Placed in a liquid medium. The apparatus used to perform the test is known as disintegration to est apparatus. The apparatus consist of a water bath which is filled with water up to mark mented Place 1000ml beakers into water bath. A basket rack holding six plastic tubes open at the top. The bottom is covered with a 10 mesh screen. The basket rack assembly is supended in liquid medium in liquid medium in 1000ml beakers. The temp of liquid is maintained at 37°C. One tablet is placed into each tube. The assembly moves up & down at a spuiffed rate (30 times per mint). A cylindrical disk made of transparent plastic is also placed over the tablet. The disc should impart little pressure on tablet. The rate of disintegration varies from tablet to tablet.

a. Disintegration test for uncoated tablet:

Place one tablet in each of 6 lubes. Use water as a liquid whose temp is maintained at 37°c. Add disc to each tube & perform experiment. All 6 tablets should disintegrate within 15 min.

b. Disintegration test for sugar coaled tablet (or other than film coaled tablet):

Place one tablet in each of 6 tubes. Use water as a liquid whose temp maintained at 37°c. Add disc to each tube & perform experiment. All 6 tablets should disintegrate within 60 min. If any of tablet has not disintegrated then experiment on further 6 tablets should disintegrate in acid medium.

C. Disintegration test for film coaled tablet:

Place one tablet in each of 6 tubes. Use water as a liquid whose temp maintained at 37% Add disc to each tube & perform experiment. All 6 tablets should disintegrale within 30 min.

d. Disintegration test for enteric coaled tablet:

Place One lablet in each of 6 tubes. Use O.IN hydrochloric acid as a liquid which tem -perature is maintained at 37°C. Perform experiment without inserting disc for 1 hours. If no tablet shows sign of discinlegration or cracks, then perform experiment using disc. Replace O.IN hydrochloric acid with mixed phosphole buffer having pH. The temperature of liquid is also maintained at 37°C. The lablets passes the lest if all lablets should be

<u>Defects Of Tablets</u>

By: Girish Reg No: NA0120019

Defects	Meaning	Causes	Remedy
1. Capping	Fracture occurs at the top of the tablet and there is partial or complete detachment of top or bottom part of tablet.	 Air entrapment. Too much fines. Over drying. Not dried. low dwe'll time. Insufficient binder. Improper lubricant. Adjustment of sweep off blade. 	
2. Lamination	It is a segregation of tablets into two or more layers.	 Air entrapment. Oily or waxy materials in granules. Large amount of hydrophobic lubricant. 	 Precompression or increase dwel time. Add adsorbent or absorbent. Less amount of lubricant.
3. Chipping	This is the defect where the film on the edge of the tablet is chipped or dented	 Too dry granules. More moisture. Exit chute is not placing tablet properly. Edge of punch face turned inside. 	 Add hygroscopic substance. Add dry binder. Properly correct machine setting. Polishing punch face.

PNS

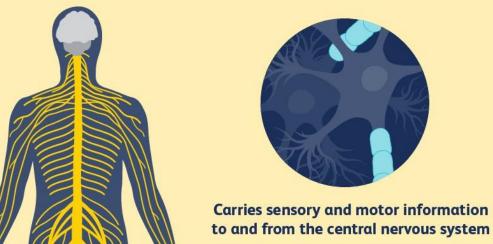

What Does the Peripheral Nervous System Do?

Connects the central nervous system to the organs, limbs, and skin

Allows the brain and spinal cord to receive and send information to other areas of the body

Regulates involuntary body functions like heartbeat and breathing

KLE College Of Pharmacy Belagavi

Topic Cardio Vascular System

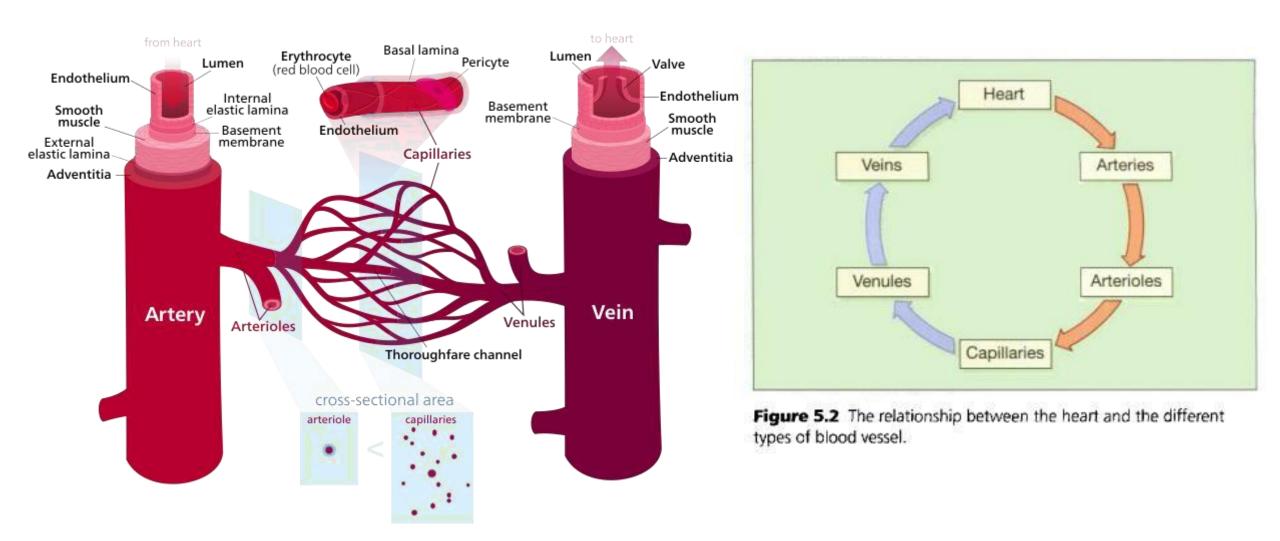

BY

Blood vessels

The heart pumps blood into vessels

- That vary in structure, size and function, and there are several types:
 - Arteries, Arterioles, Capillaries, Venules and veins.

Arteries and arterioles

- These are the blood vessels that transport blood away from the heart.
- They vary considerably in size and their walls consist of three layers of tissue.
 - tunica adventitia or outer layer of fibrous tissue
 - tunica media or middle layer of smooth muscle and elastic tissue
 - tunica intima or inner lining of squamous epithelium called endothelium.

Arteries are two types

Elastic arteries:

- it is large-size arteries composed of a well defined internal and external elastic laminae and a thick tunica media which is enriched with elastic fibres.
- It conduct blood during diastole ventricular relaxation
- It is a pressure reservoirs by storing mechanical energy which convert into kinetic energy when elastic fibre are recoiled.

DETAILS OF OUTCOME MEASURES FOR ADVANCED LEARNERS

Program	B. Pharm
Academic Year	2022-23 (Odd Semester)
Class	B. Pharm I Semester
Subject	Pharmaceutical Analysis
Subject In charge	Ms.Rohini S.Kavalapure

Remedial Measures for Advanced Learners

The advanced learner students were identified after IA1 and in order to enhance their learning they are given with assignments and asked students to write notes by their own which will be useful for their GPAT preparation.

INTRODUCTION

HEAT EXCHANGERS AND HEAT INTERCHANGERS

MOST OF THE CHEMICAL AND PHARMACEUTICAL INDUSTRIES EMPLOY A VARIETY OF HEAT TRANSFER EQUIPMENT.

THE MATERIALS TO BE HEATED MAY BE LIGUIDS

OR GIMSES OR DUINSIONALLY SOLIDS (WHICH IS A SEPERATE CASE BY ITSELF). THE HEATING MEDIA MAY BE A HOT FLUID OR CONDENSED STEAM, SOME OF THE PROCESSES, WHICH INVOLUE THE HEAT TRANSFER ENCOUNTERED IN PHARMACY AME:-

- > PREPARATION OF STARCH PASTE (STEAM JACKETED KETTLES)
 FOR GURANULATION
- MOITAZI LL ISATION
- > EVAPORATION
- -> DISTILLATION

M INDUSTRIAL PROCESSES, HEAT ENERGY IS TRANSFERRED
BY VARIOUS METHORS. THE PRINCIPLES, CONSTRUCTION AND
WORKING OF EQUIPMENT USED FOR TRANSFER OF
HEAT ENERY ARE HEAT EXCHANGERS AND HEAT INTER
CHANGERS

Heat exchangers and heat interchangers.

In industrial processes, heat energy is transferred by various methods. The principles, construction and working of equepment used for the transfer of heat energy are as follows.

Heat exchange

fleat exchangers are the devices used for transferring heat from one fluid (hot gos or strom) to another fluid (liquid) through a metal wall.

Heat interchanger.

Heat intruchangers are the devices used for transferring heat from one fluid to another or from one gas to another gas through a metal wall.

1) Define adsorption isotherm explain freundlich and langumuir absorption isomers

Answer: - Adsorption 950therm is the relationship between the adsorbate in the liquid phase and the adsorbate the adsorbate adsorbate adsorbate adsorbate adsorbate adsorbate adsorbate adsorbate adsorbate at equilibrium at constant temperature.

OR.

An adsorption isotherm is a graph that represents the variation in the amount of adsorbate (x) adsorbed on the Surjace of the adsorbent with the change in pressure at a constant temperature.

Freundlich Adsorption Isotherm.

freundlich absorption gives the variation In the quality of gas adsorbed by a unit mass of solid adsorbent with the change in presure of the system for a given temperature.

The expression for the freundlich isotherm can be represented by the following equation:

 $\frac{2c}{m} = kp/n$

SURFACE TENSION

D'Write a note on sprading co-efficient.

when a drop of olive acid is placed on the surface of water, it will spread as a film. It the spreading is spontaneous, the surface free energy of the system is reduced.

The speading of liquid can be an augud by considering the cohesive and adhesive forces operating between the molecules.

WORK OF LOHESION:

It is the energy required to separate the molecules of the speeding liquid, say office and there is no interparial tension, when the liquid alone is considered cohesive force alone are operating.

work of cohesion: $W_c = 2 \text{ TL}$ where 'Y' = the surface tension of liquid (1).
work of APHESIAN:

At is the energy required to bring out the adhesion between the unlike molecules the same amount of energy is required even to break the adhesive forces between the liquid. Now consider the hypothetical cylinder of the sublargy liquid '5' present believe the similar sublargy liquid '5' present believe the similar sublargy liquid '1' the work surron of the spreading liquid '1' the work done is equal to work of ordression = Wa = Y_L + Y_S - Y_{LS}

"THE BEST WAY TO PREDICT FUTURE IS TO (REATE IT" - PETER DRUCKER

THE INDIAN MICROBIOLOGY INDUSTRY IS ONE OF THE FASTEST GROWING KNOWLEDGE BASED SECTORS.

INDIA CURRENTLY RANKS AMONGUST THE TOP 12 BIOTE(HNOLOGY DESTINATIONS IN THE WORLD, AND IS A GLOBAL LEADER IN THE PRODUCTION OF DRUGG AND VACCINES.

FOR AN ECONOMY LIKE INDIA, BIOTECHNOLOGY IS A POWERFUL ENABLING TECHNOLOGY THAT CAN REVOLUTIONIZE HEALTHCARE ELOSYSTEM.

KUORDING TO A FORE LEAT BY THE RESOLIATION OF BIOTELHUOLOGY LED ENTERPRISES (ABLE), THE INDIAN BIOTECHNOLOGY INDUSTRY SECTOR HAS THE POTENTIAL TO BE \$ 100 BILLION (Rs. 6 lakh (rove) INDUSTRY IN THE NEXT DELADE

THE INDIAN BIOTECHNOLOGY LANGE SROADLY CLASSIFIED INTO FIVE CATEGORIES, THE MAIN INTEREST FOR IS BIOPHARMALEUTICALS.

THERE ARE APPROXIMATELY 800-850 LARGE, MEDIUM, SMALL AND STARTUP COMPANIES IN THE MICROBIOLOGY AND BIOTECHNOLOGY INDOSTRY, THERE ARE MULTIPLE DISCIPLINES WHICH ARE HUGE SPECIALITIES ON THEIR OWN. * BIOPHARMA - Drugs, Vaccines, Diagnostics.

DISINFECTANTS

INTRODUCTION

Disinfection is the process of destruction or seemoval of nicroorganisms & reducing them to a level not harmful to heath. The chemical agent is known as a disinfectant. Disinfectants are usually bacteriouidal but occasionally they may be bacteriostatic. In ideal disinfectant should have the following properties:

- * Broad spectrum
- * Non tonic
- * Fast acting
- * Odourless
- * Suspace compatibility
- * Easy to use
- a Stable on storage

Development of Conductometric Method for Quantification of Metformin HCl in Bulk and Pharmaceuticals

Arif S. Jamadar, Vaishnavi B. Patil, Shailendra S. Suryawanshi

Department of Pharmaceutical Chemistry, KLE College of Pharmacy, Belagavi, KLE Academy of Higher Education and Research, Belagavi, Karnataka.

Problem:

Metformin HCl is an orally active antidiabetic drug belongs to the chemical classification of biguanides derivatives and it is successfully applied in the treatment and management of type II diabetes mellitus. The drug is mainly available as tablet pharmaceutical dosage form in its single and combined dosage form. Therefore the quality evaluation and assessment of Metformin HCl is mandatory in pharmaceutical and drug manufacturing industries as per regulatory requirements. The literature reported conductometric methods are based on titrations and in addition they suggested the use of costly reagents to solvents. As the titrimetric methods are considered to be a time consuming with use of extra and costly reagents like silver nitrate. This indicates the limitations and disadvantages of published reports.

Innovative Solution:

In order to overcome and reduce the one or two limitations and disadvantages of reported and published conductometric titration methods for quantification of Metformin HCl as mentioned in the problem. There is strong need for development and validation of simple, cost effective, new, and accurate conductometric process for assessment of Metformin HCl in bulk and pharmaceuticals.

- We can develop new conductometric method for quantification of Metformin HCL.
- ➤ In order to see the performance of method there is need to validate the method as per current regulatory requirement.
- After validation, we need to check the industrial applicability of conductometric method we can estimate the quantity of Metformin in marketed formulation.

Idea Submission

Execution and Development of Website to Improve Medication Non-Adherence

Samruddhi V. Shinde, Sejal Kadam, Shailendra S. Suryawanshi

KLE College of Pharmacy, Belagavi, KLE Academy of Higher Education and Research, Belagavi, Karnataka.

Problem:

Medication Non-Adherence: When patients intentionally or unintentionally skip to take their medications as prescribed is unfortunately fairly common, especially among patients with chronic diseases. It is important for physicians and other health care professionals to understand why patients don't take their medication. This will help teams identify and improve patient's adherence to their medication.

Most non-adherence is intentional with patients making a rational decision not to take their medicine based on their knowledge, experience and beliefs. These are the top eight reasons for intentional non-adherence.

- Fear: patients may be frightened of potential side effects. They may have also experienced previous side effects with the same or similar medicine.
- Cost: A major barrier to adherence is often the cost. The costly medicine may lead to patients not filling their medication.
- Misunderstanding: when patient doesn't understand the need for the medicine, the nature
 of side effects or the time it takes to see results.
- Too many medications: when a patients has several different medicine prescribed with different dosing frequency.

Idea Submission

-Innovation in Healthcare & Pharmacy-

Example: Patients suffering from tuberculosis has an intensive treatment for 6 to 9 months.

Innovative Solution:

After understanding and knowing the root of the problem facing by the patients and health professionals. We can come up with an idea by combining the health care system, technology, and research data. Developing the software that can improve the patient's medication and avoid the concept of medication non-adherence.

This can help patients with proper medication, dosage and also with timings. Physicians will be able to diagnosis the patient and recover it by treating specifically. This system can also generates data related to clinical trials.

Genuine and relevant information such as patients demographic details, patients disease conditions, patients prescription details, day to day activities much be fed in the software after which the software will intimate the patients time to time to consume the medications and for follow up.

cabstract

Fat and Oil are critical for human nutrition, as a major source of energy and with numerous functionalities in biochemical pools become imperative to review it source method of extraction and chemical composition. Fat and oil are majorly sourced from plant and animal. Traditional and modern methods of extraction as well as refining were reviewed. Triglywride phospholipids, sterol pigments, fatty alcohols and tocopherol are some of the chemical constituent that defines the molecular and brothemical configuration of source oils and fats.

Introduction

Fats are triglycerides that are solid or semi-solid at room temperature, oils are also triglywholes that are liquid or clear liquid at room temperature, however their chemistry is determined by the degree of solubility. Fat and oil makes the major three classes of food after carbohydrate and proteins. They are good source of nutrient and could supply about (9 kcalonies) of energy in a metabolic pod. The functional unit of fat and Oil are triglycerious durived from fatty acid (3 Units) and glycerol (1 Unit), however fat and Oil does have other Polymeric Structures such as monomers, dimers and trimmers derived polymeric structures from free fatty acids, storol, phospholipids, tocophorol, pigments and lipoproteins moieties Potter and Hotchkis. Because of their structural positioning from fatty and group, they are grouped as saturated, monosaturated of polyeunsaturated.

Synthesis Of Poly Nuclear Hydrolarbons

Introduction.

POLYNUCLEAR HYDROCARBONS

These are the class of Alomatic hydrocaltons Containing multiple Couton alomatic Ring in which Electeons are delocalized are known as Poly Nuclear Hydrocartons.

There are two Types of PolyNuclean Hydrocarbons

- · In which Alematic Rings are Isolated.
- · In which Two of more Rings are Justed Together.

EXAMPLE'S

- · MAPHTHALENE
- · DIPHENYLMETHANE
- · ANTHRACENE
- · TRIPHENYLMETHANE.
- . PHENANTHRENE

Synthesis of These Following PolyNuclear Hydror - Carbons &s eseplained in the further pages, by different methods and Processes.

LIST CONTENT * Introduction of Aromatic Acids * Nomenclature * Physical Properties of Aromatic Acids * Structures of Aromalic Acids

INTRODUCTION

Apromatic acids are the derivatives of aromatic hydrocarbons in which one or more hydrogen atoms have been suplaced by the carboxylic groups. The carboxylic group may be directly attached to the aromatic nucleus and is known as lunzoic acid or its derivatives.

* Some contronglie acids is present in the side chain of the aromatic nucleus for Eq:

1) Benzoic acid

2) a. Toline acid

VINCA

- > Synonym: vinca rosea
- BIOLOGICAL SOURCE: vinblastine and vincristine are dimeric indole alkaloid obtained from the whole plant of Cantharus roresus
- > FAMILY: Apocyanaceae
- > GEOGRAPHICAL SOURCE: Vinca plant is cultivated as a garden plant in Europe and India
- > CHEMICAL CONSTITUENTS: about 90 alkaloids have been isolated from catharanthus
 - Alkaloids are present in there entire shrub but leaves and root contains more alkaloid
 - The important alkaloid in catharanthus are the dimer indole –indoline alkaloids vincristine and vinblastine possess anti cancer activity
- EXTRACTION AND ISOLATION: vinca leaves and herbs are minced and extracted with aqueous alcoholic acetic acid solution. After concentrarion of the aqueous extract the residue is futher extracted 2% hcl. NaOH is used to adjust the pH of the extract to 4 this again is extracted with benzene. the Ph is again raised to 7 and extracted with benzene.

Table 1. Modes of electrophoresis and basic characteristics of systems

Mode Characteristics	
Zone electrophoresis	Continuous electrolyte systems, continuous pH and ionic strength, sieving effect possible depending on support medium
Isotachophoresis	Discontinuous electrolyte system, concentrating effect, migration at same velocity
Isoelectric focusing	Continuous electrolyte system, stable and linear pH gradient, no molecular sieving effect

Total Number of Advanced Learners: 56

Anabolic-Androgenic Steroids (AAS)

Presented by Adarsh patil B.Pharm Vth semester

Definitions

Androgen: Any hormone with testosterone-like actions

 Anabolism: Cellular synthesis of organic molecules (including proteins).

Pharmacology of the Endocrine System

Presented by
Vinanti V. Nayak
B.Pharm Vth semester

Topic

S

- v Pituitary and hypothalamic hormones
- Thyroid and antithyroid Drugs
- v Adrenal Drugs
- Pancreatic Drugs
- Gonadal hormones and inhibitors

The Endocrine System

Controls many body functions

 exerts control by releasing special chemical substances into the blood called hormones

 Hormones affect other endocrine glands or body systems

DETAILS OF OUTCOME MEASURES FOR SLOW LEARNERS

Program	B. Pharm
Academic Year	2022-23 (Even Semester)
Class	B. Pharm II Semester
Subject	Pharmaceutical Organic Chemistry-I
Subject In charge	Mr. Kiran Gaikwad

Remedial Measures for Slow Learners

The slow learners in Pharmaceutical Organic Chemistry-I subject were identified based on the marks secured in IA1 exam. Then the remedial classes (Extra Classes) were conducted. Apart from remedial classes they are also given with assignments, group discussion, solving question papers, class seminars and Quiz.

Details of Slow Learners

Subject	HAP-II
Subject In charge	Dr. Priyanka Patil

Remedial Measures for Slow Learners

The slow learners in HAP subject were identified based on the marks secured in IA1 exam. Then the remedial classes (Extra Classes) were conducted. Apart from remedial classes, they are also given with assignments, group discussions, solving question papers, class seminars and Quiz. (Submit proof for each activity which you have done for slow learners).

PRESENTATIONS BY SLOW LEARNERS

MICROMERITICS

Presented By. Mr. Abhishek Patil IV SEM Subject- Physical Pharmaceutics II KLE College of Pharmacy Belagavi

Applications of Micromeritics in Pharmacy

The knowledge and control of the size of particles is of importance in pharmacy and materials science. The size & hence the surface area of a particle can be related to the physical, chemical & pharmacologic properties of drugs.

- Release and Dissolution
- Absorption and drug action
- · Physical stability of formulation -Biphasic formulations
- · Dose uniformity

Micromeritics: It is the science and Technology of small particles in the size range of few micron size.

Particle size is denoted in micrometers (µm)= 10-6 m,10-3 mm

Particles are characterised by following properties Size, Shape, Volume, Surface area, Density, Porosity, Flow properties

Particle Size and Size Distribution

In a collection of particles of more than one size, two properties are important, namely-

- . The shape and surface are of the individual particles.
- . The particle size and size distributions (The size range and number or weight of particles).

Particle Size : The size of a sphere is readily expressed in terms of its diameter.

- The Surface diameter, ds, it is defined as the diameter of a sphere that has the same volume/surface area ratio as a particle of interest
- . The Volume diameter, dv, is the diameter of a sphere having the same volume as the particle.
- The Projected diameter, dp., is the projected diameter of a sphere having the same observed area as the particle. The Feret diameter or Feret's diameter is a measure of an object size along a specified direction. In general, it can be defined as the distance between the two parallel planer restricting the object perpendicular to that direction
- The Stokes diameter, dst, is the diameter which describes an equivalent sphere undergoing sedimentation at the same rate
 as the asymmetric particle.

Any collection of particles is usually <u>polydisperse</u>. It is therefore necessary to know not only the size of a certain particle, but also how many particles of the same size exist in the sample. Thus, we need an estimate of the size range present and the number or weight fraction of each particle size. This is the particle-size distribution and from it we can calculate an average particle size for the sample.

Distribution curves

PARTICLE SIZE DISTRIBUTION

The frequency of distribution of particle sizes is as important as the size itself.

Presented graphically:

Concise and allows easy visualization of the results.

Size distribution is broken down into different size ranges.

Present data in a histogram.

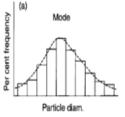

Plot the number (or weight) of particles lying within a certain size range vs. the size range or mean particle size.

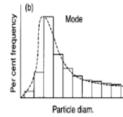

A frequency distribution curve is obtained

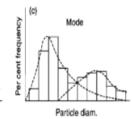

Can compare the characteristics of 2 or more powders.

- Frequency distribution curves
- · Log normal distribution curves
- Cummulative distribution curves
- Log Probability Plot

Frequency distribution curves corresponding to (a) a normal distribution, (b) a positively skewed distribution and (c) a bimodal distribution.

Cumulative frequency distribution curves

- Point a corresponds to the median diameter.
- · b is the lower quartile point.

DETERMINATION OF PARTICLE SIZE AND FLOW PROPERTIES OF POWDERS

Presented By. Mr. Yash Manepure IV SEM

Subject- Physical Pharmaceutics II KLE College of Pharmacy Belagavi

1- Carr's compressibility index (Cont.):

Relationship between powder flowability and % compressibility

Flow description	% compressibility
Excellent flow	5 - 15
Good	16 - 18
Fair	19 - 21
Poor	22 - 35
Very poor	36 - 40
Extremely poor	> 40

Tests to evaluate the flowability of a powder:

1- Carr's compressibility index

A volume of powder is filled into a graduated glass cylinder and repeatedly tapped for a known duration. The volume of powder after tapping is measured.

Carr's index (%) =

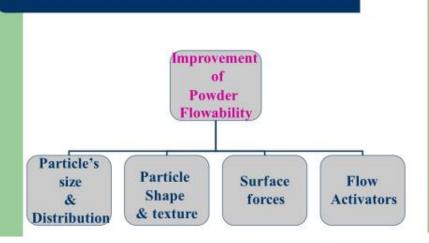

Tapped density - bulk density x 100

Tapped density

Bulk density = weight / bulk volume

Tapped density = weight / true volume

Factors affecting the flow properties of powders:

Tests to evaluate the flowability of a powder (Cont.):

3- The angle of repose φ:

The frictional forces in a loose powder can be measured by the angle of repose ϕ .

φ = the maximum angle possible between the surface of a pile of powder and horizontal plane = coefficient of friction μ between the particles:

angle of repose

$$\tan \varphi = \mu$$

 $\tan \varphi = h/r$
 $r = d/2$

3- The angle of repose φ (Cont.):

- The sample is poured onto a horizontal surface and the angle of the resulting pyramid is measured.
- The user normally selects the funnel orifice through which the powder flows slowly and reasonably constantly.
- Angle of repose less than 20 (excellent flow)
- Angle of repose between 20-30 (good flow)
- Angle of repose between 30-34 (Pass flow)
- Angle of repose greater than 40 (poor flow)

***The rougher and more irregular the surface of the particles, the higher will be the angle of repose.

Derived properties of powders (Cont.):

4- Flow properties:

- Powders may be free-flowing or cohesive ("sticky").
- Many common manufacturing problems are attributed to powder flow:
- 1- Powder transfer through large equipment such as hopper.
- 2- Uneven powder flow → excess entrapped air within powders → capping or lamination.
- 3- Uneven powder flow → increase particle's friction with die wall causing lubrication problems, and increase dust contamination risks during powder transfer.

Factors affecting the flow properties of powders (Cont.):

Alteration of Particle Shape & texture

Particle's Shape:

Generally, more spherical particles have better flow properties than more irregular particles.

Spherical particles are obtained by spray drying, or by temperature

cycling crystallization.

Particle's texture:

particles with very rough surfaces will be more cohesive and have a greater tendency to interlock than smooth surfaced particles.

THANK YOU

Program	B. Pharm
Academic Year	2022-23 (Even Semester)
Class	B. Pharm VI Semester
Subject	Pharmaceutical Biotechnology
Subject In charge	Dr. D. Nithyananda Sastry

Remedial Measures for Slow Learners

Based on the criteria of slow learners set by the institution, on basis of pace of understanding and on basis of the marks secured in IA1 exam no slow learners are identified in the Pharmaceutical Biotechnology subject for the year 2022-.23(Even semester). However appropriate extra classes were conducted for the relative low performers. Student was counseled regularly and was given the required study material. They were informed about self learning resources and the importance of self study Apart from remedial classes they are also given with assignments, encouraged to view short biotech subject vedios, were given model question and answer papers.

Benefits of Self learning

Learning at convenient pace, Develops ownership of learning

- Driving force to learn more & more focusing on areas of interest, may help to reduce feelings of boredom. frustration, anxiety
- When, how long to study or whether to re-study,

Learning of new things and new skills, Better insights into learning

 curiosity is triggered by self-paced learning develop deep interest and enthusiasm while augmenting creative skills, more opportunities to have deeper understanding and expansion of knowledge

Freedom to use various models of learning E, M-learning

 E-learning through streaming channels, tutorials, books, podcasts, webinars, discussions, polls, activity walls, self-learning through quizzes, PDFs, assignments, etc

Stress-free meaningful learning process

- learn time management, problem identification & solving skills
- Keep learners motivated, persistent, self-disciplined, self-oriented, and target-oriented.
- Improves self-esteem and self-reflection

Learners demonstrate greater awareness

Self learners are more focused dealing commitments. in handling duties, responsibilities,

Self learning resources suggested

EXPERIMENTAL PHARMACOLOGY 8th SEM

INNOVATIVE TEACHING METHODOLOGY

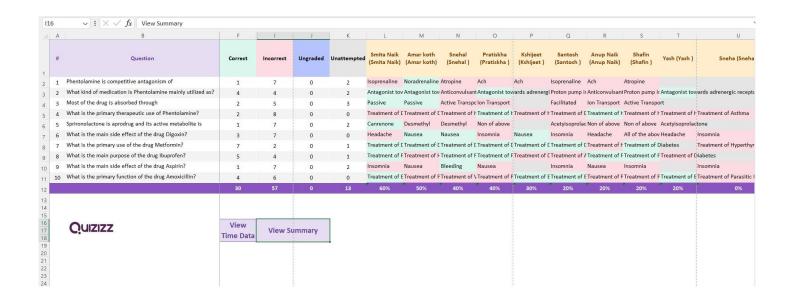

The following are the innovative teaching methodology adopted for the 8th Sem students

- 1. Team Based Learning (TBL)
- 2. Problem Based Learning (PBL)
- 3. Gamification
- 1. **Team Based Learning (TBL)** Students of Final year 8th Sem were divided according to their interested research areas and assign to come up with Biomarkers and in vitro assays to evaluate the particular pathologies and molecular mechanism

Team	Participant	Research Area
Agonist	Amar Khot, Sneha	Diabetes
Antagonist	Smitha, Yash	Cancer
Receptors	Shafin, Santhosh	PCOD
Enzymes	Abubakar, Anup	Nootropic
Dopamine's	Pratiksha, Owais	Alzheimer's

2. **Problem Based Learning (PBL)** – Students were given research papers of their interested thrust areas and were told to write justification for the standard drug, materials, animals used for particular study

Team	Participant	Questions
Agonist	Amar Khot, Sneha	Why Female rats are used for olanzapine induced Metabolic Syndrome
Antagonist	Smitha, Yash	Why Mice are used for study on liquid tumour cancer
Receptors	Shafin, Santhosh	What are the parameters and biomarkers to detect early signs of ovarian cancer
Enzymes	Abubakar, Anup	What are the newer parameters to evaluate in rats for cognition and stimulant studies
Dopamine's	Pratiksha, Owais	What kind of compounds can be made to pass through BBB and how to evaluate the permeability

Subject – Experimental Pharmacology

Introduction

Gout:

a hitinogenous clinical aspectum ob discoulus including hyperuntermia. recurrent ob discoul of arthrills associated with deposition of fluid luckoughs, dynorits in asymmetical around friends.

History:

The earliest distant recognised as a climate intity first identified by Egyptians in 2600BC Court was first recognised by Hypowrates in the tenting BC who referred it as a conventional distance of the supportance of the term ignet is denuited from.

In term ignet is denuited from.

PRIMARY GLOUT 90.1. Tass Engyme defects. write acid and durings increation of unite acid. Frantial Harry defects. Town production of SECONDARY GOUT. 10% last.

increased mulic acid unit acid with increase turnows - eg: lukemas. winary.

-> Reduced excreation of wie -aid & nomal production. 24. Chronic renal direase

Intom wrons of redo - our froduction of deficing. Complete Happer unic acid

Eliology And Palhogeneris

purins metabolism. Two pallways an involved in purins sugnificant i.e.

of de nous pathway - purious significanced by

prom the breakdown of muclin aid of and on inogenous wigns.

The insyme byponanthine gaunine phosphor tony transferare [HOFRIT] is involved in saluage frathway of this insymme leads to increased agrithms of purine nucleotides through increased production of their acid.

Du to the deficiency of this unsyme may also indus bypurerecinia.

RHEOLOGY

* NON - NEWTONION FLOW

* Elow.
Flow or fluids are classified ento two class
-es they are

Fluid / Flow

New tonian Fluid

Non-Newtonian Flied.

Timi Independent Timi dep

Pseudoplastic endent

plastic + Thereology

dilatant Rheopony

* Non-Newtonlan System

Non remlorian fluids (flow) are those cubich does not obey's or follow newton law of fluid

-It which, stress shear and reate of shear is

Mis Cosicity is not Constant.

Eg: Eymulsion, Gel, Dintment Etc.

Types of Non Newtonia fluid Plastic Pseudo plastic Dilatan - Plastic Flow Those material / substance which follow plastic low Called bingham bodies. In this flow when we apply shear stress nhially their are no change in shear strain (Rat of shear) until shear stress reaches yield value.

Yield Value. The ant of shear stress are equired to break the flocules is called yield Value.

It is indicated by (f) Shear 0.00 5 000 Stress 000 After Wild Value they follow newtons law of flow. At a Certain point after the flocus break they follow neuton lew of fluid

TYNDALL EFFECT:

The Tyndall ebbect is the phenomenon in which the parkiller in a colloid
scatter the beams ob light that are directed
at them. This ebbect is enhibited by a all
colloidal solutions and some very line suspensions Therefore it can be used to verify
il a given solution is a colloid

The intensity ob scattered light depends on the density of the colloidal particles as well as the brequency of the incident light

Presentation / Seminar

Introduction Traditional Chinese medicine

(TCM) originated in ancient China and has evolved over thousands of years.TCM practitioners use herbal medicines and various mind and body practices, such as acupuncture and tai chi, to treat or prevent health problems.

Traditional forms

03

Traditional forms of medicine have been used in China since the 3rd Century. Traditional Chinese Medicine (TCM) system consist three parts:

- 1. Theory; Yin Yang 🛭 5 elements
- 2. Treatment; Herbalism ,Acupuncture, Moxibustion,Cupping Massage therapy
- 3. Prevention; Qi gong, Tai ji, Meditation, Massage

Assignments:

Adrenergic system:

Presented by: AMAR SURESH DHARMATTI

Adrenergics & Antiadrenergics

- □ Anatomy of the sympathetic nervous system
- Neurotransmission at adrenergic neurons
- Adrenoceptors
- □ Adrenergic

Drugs

□ Centrally-acting sympatholytic drugs

Anatomy of the sympathetic nervous system

- □ The origin is from thoracolumbar segments "all thoracic + lumbers L1, L2, L3 and L4"
- They have short preganglionic fibers, and it relays in sympathetic chain ganglia & release Ach in these ganglia
- They have long postganglionic fibers that innervate their body organs & release Norepinephrine as a neurotransmitter there

Molecular Mechanism of Action of Sympathomimetics

Table 6–3. Characteristic	s of	some	important	adrenoceptors	in	the ,	ANS.	
---------------------------	------	------	-----------	---------------	----	-------	------	--

Receptor	Location	G Protein	Second Messenger	Major Functions
α_1	Effector tissues: smooth muscle, glands	G _q	↑IP ₃ , DAG	↑ Ca ²⁺ , causes contraction, secretion
α_2	Nerve endings, some smooth muscle	G _i	↓cAMP	↓ Transmitter release, causes contraction
β1	Cardiac muscle, juxtaglo- merular apparatus	G _s	↑ cAMP	↑ Heart rate, ↑ force; ↑ renir release
β ₂	Smooth muscle, cardiac muscle	G _s	↑ cAMP	Relax smooth muscle; ↑ glycogenolysis; ↑ heart rate, force
β_3	Adipose cells	G _s	↑cAMP	↑ Lipolysis
D ₁	Smooth muscle	G _s	↑cAMP	Relax renal vascular smooth muscle

Characteristics of Subtypes of Adrenergic Receptors

Receptor	Agonist	Antagonist	Tissue	Response
α1	Phenylephrine	Prazosin	Vascular smooth muscle	Contraction
			Liver	Glycogenolysis; gluconeogenesis
			Intestinal smooth muscle	Hyperpolarization & relaxation
			Heart	Increased contractile force; arrhythmias
α2	Clonidine	Yohimbine	Pancreatic islets	Decreased insulin secretion
			Platelets	Aggregation
			Vascular smooth muscle	Contraction

Characteristics of Subtypes of Adrenergic Receptors

Receptor	Agonist	Antagonist	Tissue	Response
β1	Dobutamine	Metoprolol	Juxtaglomerular cells	Increased renin secretion
			Nerve terminals	Decreased release of NE
			Heart	Increased force and rate of contraction and AV nodal conduction velocity
β2	Salbutamol, Terbutaline	α-methyl propranolol	Smooth muscle	Relaxation
			Skeletal muscle	Glycogenolysis
			Liver	Glycogenolysis; gluconeogenesis
β3	BRL 37344	ICI 118551	Adipose tissue	Lipolysis

Molecular Mechanism of Action of Sympathomimetics

Receptor	Location	G Protein	Second Messenger	Major Functions
α_1	Effector tissues: smooth muscle, glands	G _q	↑IP ₃ , DAG	↑ Ca ²⁺ , causes contraction, secretion
α_2	Nerve endings, some smooth muscle	G _i	↓cAMP	↓ Transmitter release, causes contraction
β_1	Cardiac muscle, juxtaglo- merular apparatus	G_s	↑ cAMP	↑ Heart rate, ↑ force; ↑ renin
β_2	Smooth muscle, cardiac muscle	G _s	↑ cAMP	Relax smooth muscle; ↑ glycogenolysis; ↑ heart rate, force
β_3	Adipose cells	G_s	↑ cAMP	↑ Lipolysis
D ₁	Smooth muscle	G _s	↑cAMP	Relax renal vascular smooth muscle

Academic Year	2022-23 (Even Semester)
Class	B. Pharm IV Semester
Subject	Pharmaceutical Organic Chemistry-III (Theory)
Subject In charge	Mr. Shailendra S. Suryawanshi

Remedial Measures for Advanced Learners

The advanced learner students in **Pharmaceutical Organic Chemistry-III (Theory)** were identified after IA1 and in order to enhance their learning they are given with Assignments, Seminars, and Solving Question Papers (MCQs).

Details of Advance Learners

Registration Number	Name of the Mentees	Marks obtaine d in IA-I (Marks more than 70%)	Total Numb er of Advan ced Learne rs	Assignments Given /Paper or poster presentation/conferences attended/seminars /project works/any other activity etc
NA0121002	ADIL JAVEDALI BELAWADI	13.5		Assignment and Question Paper Solving (MCQ)
NA0121002	AKANKSHA TUKARAM GHADI	13.75	86	Assignment and Question Paper Solving (MCQ)
NA0121004	AKASH MARUTI BORAGANVE	14		Assignment and Question Paper Solving (MCQ)
NA0121005	AMAR SURESH DHARMATTI	14		Assignment and Question Paper Solving (MCQ)
NA0121006	AMOL MAHAVEER PATIL	14		Assignment and Question Paper Solving (MCQ)
NA0121007	AMRUTA RAGHAVENDRA KULKARNI	13.5		Assignment and Question Paper Solving (MCQ)
NA0121008	ANAM SAYEED SHAIKH	13.75		Assignment and Question Paper Solving (MCQ)
NA0121009	ANAMIKA P CHOUGULE	13.5		Assignment and Question Paper Solving (MCQ)
NA0121010	ANANYA PANDEY	13		Assignment and Question Paper Solving (MCQ)
NA0121012	ANUSHREE MAHANTESH UTTUR	12		Assignment and Question Paper Solving (MCQ)
NA0121014	ATHARV DADDI	14		Assignment and Question Paper Solving (MCQ)
NA0121015	CHAITRALI MARADI	15		Assignment and Question Paper Solving (MCQ)
NA0121016	CHANCHAL GHANSHYAM TAPDIYA	14.5		Assignment and Question Paper Solving (MCQ)
NA0121018	GANGADHAR SOMANAGOUDA MELED	14		Assignment and Question Paper Solving (MCQ)
NA0121019	HRITHIKA PARASHARAM RAJAGOLKAR	14		Assignment and Question Paper Solving (MCQ)

Question Paper (MCQ) Solving

Students are also given with task of solving MCQ papers to enhance the learning.

Question Paper

Q.	MCQs				
No.					
1.	The compounds having same molecular & s space are known as:	tructural	formula but differ in spatial arrangement in		
	A. Stereoisomers	В.	Structural Isomers		
	C. Geometrical isomers	D.	Optical Isomers		
2.	The molecules having same molecular & str		<u> </u>		
	space with ability to direct the plane polariz	······			
	A. Optical Isomers	В.	Geometrical Isomers		
	C. Meso-compounds	D.	Conformational Isomers		
3.	Meso-compounds possesses				
	A. All Elements of Symmetry	В.	Plane of Symmetry		
	C. Centre of symmetry	D.	Alternative axis of symmetry		
4.	Identify the chiral molecule:				
	A. Isopropyl alcohol	В.	Lactic Acid		
	C. 2-Pentanol	D.	1-Bromo-3-Butane		
5.	Optical activity is:	·			
	A. Ability of molecule to visible light	В.	Ability of molecule to direct plane UV light		
	C. Ability of molecule to direct plane	D.	Ability of molecule to direct plane		
	polarized light		polarized light towards right		
6.	Dextro-rotatory compounds directs the plane	e polarize			
	A. Left	В.	Left and Right		
	C. Right	D.	Towards the plane		
7.	Which of the following possesses geometric	al isome	rs		
	A. Alkanes	В.	Butane		
	C. Aromatic compounds	D.	Alkenes		
8.	Which of the following system is used for n	omenclat	ture of geometrical isomers		
	A. DL	В.	RS		
	C. Sequence Rules	D.	Cis-Trans		
9.	Identify the conformers in cyclohexane				
	A. Chair & boat form	В.	Chair form		
	C. Eclipsed conformation	D.	Boat Form		
10.	Condition for optical activity in biphenyl co	mpounds	s is:		
	A. Both rings should be non-coplanar	В.	Both rings should be planar		
	C. Both rings should be coplanar	D.	Both rings should be not-substituted

Activities conducted Advanced Learners:

Seminars:

Programe	B.Pharm	
Academic year	2022-23 (Even Semester)	
Class	VI Semester	
Subject	Biopharmaceutics and Pharmacokinetics	
Subject In-Charge	Mrs.Rajashree.S.Masareddy	

Measures to enhance learning of Advanced Learners

The advanced learner students in Biopharmaceutics and Pharmacokinetics (Theory) were identified after IA1 and in order to enhance their learning assignments are given and performance evaluated.

Details of Advance Learners - Biopharmaceutics and Pharmacokinetics

Total No. of Advance learners: 40

B.Pharm VI Sem

KLE College of Pharmacy, Belagavi

Programme	B. Pharm
Academic Year	2022-2023(Even Semester)
Class	Pharm VI Semester
Subject	Pharmaceutical Quality Assurance
Subject In Charge	Ms. Nisha Shirkoli

Remedial Measures for Advanced Learners

The advanced learners in Pharmaceutical Quality Assurance subject were identified after IA 1. In order to enhance their learning, they were given assignments on different topics. There was total 49 advanced learns in Pharmaceutical Quality Assurance subject.

Reg. No.	Name of Mentees	Marks Obtained in IA-1(Marks more than 70%)	Total No. of Advanced learners	Assignments give/ Paper or poster presentation/Conferences attend/ Seminars/Project works/ any other activity etc.
NA0120001	Adarsh Patil	14	49	Quality By Design
NA0120002	Agalgave Vaishnavi Chandrakant	13.75		General concepts on ISO and ISO 9000
NA0120003	Akshata Virupkashi Athanimath	12		ISO 14000
NA0120004	Alfanzaheer Sajjadzaheer Kittur	12		GMP on m and Personal
NA0120005	Amit Dalawai	12		GMP- Premises
NA0120006	Amrut Sadanand Gurav	12		GMP- Equipments
NA0120007	Ashlesha V Bhatkande	12		GMP- Raw materials
NA0120008	Siddhesh Santosh Bandekar	13		GMP- Sanitation, Environmental control, utilities, and maintenance of sterile areas
NA0120009	Basavaraj P Patil	12		QC test for containers and closures and other packaging materials
NA0120010	Bharat B Patil	13		GLP- organisation and personal
NA0120014	Deepak Ashok Oswal			Evaluation of complaints, handling of return goods
NA0120015	Divya Ratnakumar Patil	12		Recalling and waste disposal
NA0120017	Gautam Naik	12		SOP, Quality Audit, reports and documentation, Distribution records

IMMUNOBLOTTING

TECHNIQUES

Immuno blotting: -

- · Blotting provides a means of indentifying specific molecules out of a mixture. It employs three meun steps.
- · First, the mixture of molecules is separated by gel electrophorosis. The mixture could be DNA (Southern Blot), RNA (Northern blot), or protein (western blot).
- · second, after the gel run is complete, the proteins or nucleic acids in the gel are transferred out of the gel onto a membrane | paper that physically binds to the molecules.
 - The transfer can be accomplished by diffusion or by using an electrical current to move the molecules from the gel onto the membrane.
 - · Third, a visualizing agent specific fer the molecule of interest in the mixture is added to the membrane. For Duit | Ruit , that might be a complementary nucleic acid sequence that is labeled.
 - for a protein, it would typically involve an antibody that specifically binds to the protein of interest. The bound antibody can then be terreted by another body specific usually linked to an enzyme which, in the presence of substacle, cadealyze. -s a reaction that produces a signal color or light) indicating where the anti-body is bound.

ALOE

- *BIOLOGICAL Source: Alse is the doied juice collected by incision, from the bases of the leaves of Alse peving Baker, Alse vera kinn or Alse barbadenin Mil & Alse feron Miller. *FAMILY: Liliaceae
- * GEOGRAPHICAL Source: East & South offica, West Indies, Tropical & Mediterranean countries.
- * TYPES: a. Curação or barbados aloe

 b. Socotrine aloe

 C. Zanzibas aloe

 d. Cape aloe
- * CHEMICAL CONSTITUENTS:
- a. Three isomers of Aloins i.e., Basbaloin, B-basboloin of inobasbaloin (~10%)
- b. rusin, emodin, alse emodin
 - c. Alberin
- 2. Aloinosides A & B in Cape aloes.
- e. Vitanins-A, C, E & 1312
- f. Enzymes-amylare, catalase, peronidase
- g. Minerals-Zenc, Copper, Selenium & Calcium h. Sugars-mono & polysaccharicles.

Good Agriculture Practice Introduction

Objectives of GAP.

General Guidelines on GAP for medicinal plants.

de Reference.

Good Agricultural Practice.

I good Agricultural Practice of medicinal plants is a cultivation program designed to ensure optimal yield in terms of both the quality & quantity of any crop intended for health purposes. The quidelines on Good Agricultural Practices (GAP) provide us the documented froof on how to handle medicinal plants eight from its cultivation to fost-harvesting operations. Raw medicinal plant materials should meet all applicable national or regional quality standards.

Objectives of GAP:

To contribute to quality assurance of medicinal plant materials used as source for belook medicines, which aims to improve the quality, safety & efficacy of finished herbal products.

(i) to guide the formulation of national or regional guidelines of monographs for medicinal plants of related standard operating procedures (SOP)

Collection of medicinal plants for good quality that respect t support the conservation of medicinal plants for good quality that plants of the encironment in general.

Carbon-13

Definition ->

NMR spectroscopy stands for Nuclear Magnetic Resonance spectroscopy. It is an analytic technique we use to identify molecules and determine their structure.

What is C-13 NMR?

C-13 NMR is a form of NMR spectroscopy that uses carbon atoms to work out the structure and identity of a molecule.

Spin => * MMR that nuclei with an odd mass number have a property called spin.

spin can be influenced by external Magnetic field and Makes nuclei behave a little like bar magnets.

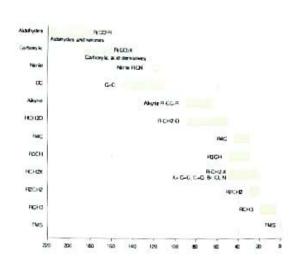

*If placed in an external magnetic field, these nuclei line up so their spin is either parallel to the field or antiparallel.

-> If they one in parallel state, we call them spin aligned.

them spin opposed.

Resonance ->

*Most nucles with spin in a magnetic field are spin alligned, in their parallel state

This is because of is more energetically stable.

Than its antiparallel state.

* Flipping a nucleus from its parallel to its

The energy Required to do this known as Magnetic resonance frequency.

Magnetic Pield strength ->

* Magnetic nuclei feel the strength of magnetic field differently.

* This is because electrons shield nuclei from external magnetic fields.

* Oxygen is a lot more electronegative than Carbon and so pulls the shared pair of e- towards itself, leaving carbon atom e-dificient.

MASS ANALYZERS

Another important part of man spectrometer is the man analyzer that is used to reparate the ions.

Why do we need man analyzees?

It is not enough to generate ions by different ionization techniques but it is also necessary to separate them from each other. Man analyzers are used for ion reparation of their overview can be simplified by considering two basic physical phenomeno

- i) Thouged species can be easily accelerated by applying an electrostatic potential difference
- ii) An accelescated electric charge generates an electromagnetic field
- A few desirable peropecties of mass analyzers are To achieve good selectivity, mass analyzers should separate the ions with susonable exsolution
- · Sensitivity depends not only on the ionization efficiency but also on the teransmittance of mass analyzeous
- Man analyzeers should have apperoperate man to change (m/z) limit. to be able to detect compounds with wide molecular man sunge

DETAILS OF OUTCOME MEASURES FOR ADVANCED LEARNERS

Program	B Pharm
Academic Year	2022-23
Class	B Pharm Fourth year (8 th Sem)
Subject	Cell and Molecular Biology
Subject In charge	Mr. Prakash R Biradar

Remedial Measures for Advanced Learners

The advanced learner students were identified after IA1 and in order to enhance their learning they are given with Summer research projects, Assignments, Seminars, Group Discussion, GPAT classes, Short term studentship of ICMR, motivated to attend conferences, workshops, training programs etc. and present oral/poster presentations.

Research Project

Pharmacological Evaluation of Mast Cell Stabilization property of *Raphanus sativus l. Var Niger* methanolic extract on compound48/80 induced Anaphylactic activity of respiratory disorder in mice

Registration Number	Name of the Mentees	Assignments Given /Paper or poster presentation/conferences attended/seminars /project works/any other activity etc

EXCIPIENTS USED IN PARENTRALS

Introduction:

Parenteral preparations are Sterile preparations intended for administration by injection, infusion, or implantation into the human or animal body. These products must be Sterile, pyrogen free, and in the Case of solution, free of particulate matter. It needs no flavoring and succeeding agents for its palatitistity. The products should preferably be isotonic and depending on the route of administration, there are some constraints on use of certain excipients.

Usually for parenteral products, letter high purity groades 1 excipients are used. Those excipients which withstand at terminal sperilization or aseptic processing are preferentially selected. A new additive in a product always requires an additional sudy which usually adds to the cost and throckne of product development. Inclusion of an excipient in the Generally Recognized as safe (GRAS) list or pharmacopoela does not mean that, the excipient has been deemed safe by the FDA for use in parenteral products.

AEROSOLS

9080501:

- A tiny solid or liquid particle suspended in wir or as a gas.

- Acrosols can be natural, such as you are gas trom volcanic eruptions, or artificial such as smoke troom burning possil juels.

A system that depends on the power of a compressed gas to except the contents from the container.

Uses of Aerosols:

Aerosols are used in cosmetics such as hairspray, deodorant sprays, journing agents, sprays and sunscreen etc.

In addition, they are used in health care as dising ectants, inhalors, anesthetic preparations.

PARENTERAL PREPARATION AND IT'S TYPES

DEFINITION:

Parenteral preparations are intended for use by injection under or through one or more dayers of the skin or mucos membranes.

- These must be free from microbial contamination and from toxic components as well as posess an exceptionally high level of purity.
- All components and all processes involved in the preparation of these formulations must be selected and designed to eliminate contamination of all types, whether of physical, chemical, or microbiological origin

PRODULT DEVELOPMENT:

- → The final sterile product must give a therapeutic effect in a patient.
- The effect of physical and chemical factors on psuparation concentration be minimum.
- The preferred preparation for neural use one solution.

 Preparation for intramuscular, subcutaneous, intradenmentuse can be solutions. Suspensions on emulsions

- The Chemical and physical proporties of a doing must be analysed for knowledge about onset of action, interaction with excipients and stability.
- The solvents system should produce no tissue interaction thus be free from any traces.

 Eg! Minute traces of Copper accelerate state of oxidation of ascorbic acid.

CLASSIFICATION OF PARENTERAL PREPARATION:

1) Small volume parenterals!

An injection that is packed in containers dabelled as containing looms or less.

- → These are used for oringle on multiple use.
- of mall volume parenterals are used to produide
- These are administered through leavisous parentinal stoutes and it contains presentative

Examples!

Most common in insulin injection administered during diabetes mellitus, procaine penicillim of P-injection given during a bacterial injection.

GOOD CLINICAL PRACTICE

IN

PHARMACOVIGILANCE STUDIES.

- · Goals And Objectives:
- → To understand:
 - "The affect of Good Clinical Practices on institutions conducting Clinical Research.
 - → To Discuss:
 - · What is GCP
 - · Guidelines for GCP
 - · The History of Good Clinical Practices
 - · Basic Principles
 - · Practices and Straturgy for Staying Complaint with Good clinical Practices.

phase 2 touals gather prother safety data and wildard of the drug efficacy.

phase 3 further tests the products effectiveness on a greater number of participants, and monitors side effects.

phase 4 trials can be conducted after a preduct is abready appround and on the market to find out more about the treatments long-term risks.

It is estimated that only 5 in 5,000 compounds that enter preclinical testing make it to human testing, and only 1 of those 5 may be Safe and effective enough to reach pharmacy level

Details of Assignments Submitted

In order to improve learning, slow learners are given with assignments. After submitting by students they were evaluated.

Acid-base indicators :

- ♦ They are indicators used to indicate the end point of acid-base titrations
- (i.e. indicate the completeness of the reaction by changing their colors).
- ♦ Each indicator has its specific {pH range} which is the range of pH within which the indicator changes its color.

Pharmaceutical Indicators

 Indicators are substances that change colour when they are added to acidic or alkaline solutions. Litmus, phenolphthalein, and methyl orange are all indicatorsthat are commonly used in the laboratory.

Steps for the determination of a sample using titration

(3 steps to determine the sample concentration)

 1_{st} Preparation of the standard solution (usually HCl, H2SO4 or NaOH) and standardization of it by titration against a primary standard 2_{nd} Titration of the sample with the prepared standard solution and observation of the E.P.

 $\mathbf{3}_{rd}$ Calculation of the sample concentration. N.B.

We say:

Titrate	. with or agains	$tor \neq$	
in the flask in the b	ourette		

Determination of HCl sample

- a) Preparation of 0.1 N NaOH & standardization of it.
- b) Titration:
- 1- Transfer 10 ml of HCl sample into a clean conical flask (by bulb pipette).
- 2- Add 10 drops ph.ph. indicator.
- 3- Titrate ≠ 0.1 N NaOH (in burette).

Color change at E.P.:

from Colorless to first pink persistent for 30 sec.

c) Calculations: will be discussed later.
Repeat the experiment on another 10 ml sample using 2 drops M.O. indicator.

Color change at E.P.: from Red to Orange

Determination of Aspirin tablets (Back titration)

Remedial Measures for Slow Learners

Based on the criteria of slow learners set by the institution, on basis of pace of understanding and on basis of the marks secured in IA1 exam 10 slow learners are identified in the Medicinal Biochemistry subject for the year 2022-.23. Appropriate extra remedial classes were conducted for the relative low performers. Student was counseled regularly and was given the required study material. They were informed about self learning resources and the importance of self study Apart from remedial classes they are also given with assignments, encouraged to view short biochemistry subject videos, were given model question and answer papers.

PHARMACC KINETICS

Name: Karissa Chelsea fernandes

Roll no: NP0121011

Course: Pharm D 2rdyr.

Subject: Pharmacology

DEFINITION:

Phasimacokinetics is desived from 2 words:

Phasmacon meaning daug and kinesis meaning movement. In shost It is "what the body does to the daug". It includes absosption (A), distablish (A), metabolism (M), excuetion (E) [ADME].

All these parcesses involve movement of the dawy molecule thanger various biological membrane.

· All biological membranes are made up of lipid bilayer. Drug cross various biblogical membrane by the following mechanisms.

PASSIVE DIFFUSION:

It is bidixectional process. The drug molecules move from a region of higher or lower concentration ontil equilibrium is attained.

The mate of diffusion is dimectly propositional to the concentration quadient acmoss the members.

lipid soluble daugs one tanaponted across the membane by possive diffision.

It does not require energy.

2 FILTERATION:

filleration depends upon the molecular size and weight of the dawy

If the dang molecules are smaller than the porses, they are filtered easily through the memberone.

3 SPECIALIZED TRANSPORT:

- Active Transport The drug molecules move from a region of lower to higher concentrate against the concentration gradient.
- * It requires energy, eg -> transport of sympathomimetric amines into neural tissue, transport of

PHARMACO-KINETICS

NAME: - MANISH.B. KORI

Sub: Phanmacology.

EVALUATED BY:

Dr. Naycem. A. Khaleb. Professor and HOD of Pharmacology. KLE college of Phanmacy, Belagare.

KLE Academy of Higher Education and Research, Belagani

PHARMACODYNAMICS

Pharmacon: doug, olynamic: power.

what the doing does to the body."

It is the study of dauge - their mechanism of action, pharmacological actions and adverse effects.

- * Types of Doug Action sueus
- 1. Stimulation: Some daugs act by increasing the activity of specific organ/system, eg: advenaline stimulates the heart resulting in an increase in heart rate and force of contraction.
- 2. Depoission: some dougs act by decreasing the activity of specific organ/system.
 Eg: alcohol, barbiturates, general anaesthetics, etc deposes the central nervous system.
- 3. Isouitation: Certain agents on topical application can cause isouitation of the skin and adjacent tessues. when an agent on application to the skin relives deep seated pain, et is known as countersocitant. Eg: eucalyptus oil, methyl salicylate etc.
- 4. Replacement: when there is a deficiency of endogenous substances, they can be suplaced by downgs. Eg: insulin in diabetes mellitus
- 5 Cytotoxic: Dougs one relectively toxic for the infecting organism/concer cells.
 Eg: antibiotics/anticancer dougs.

DETAILS OF OUTCOME MEASURES FOR ADVANCE LEARNERS WITH ASSIGNED TOPICS

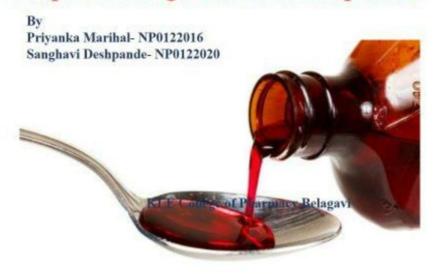

Program	Pharm D
Academic Year	2022-2023
Class	Pharm D I year
Subject	Pharmaceutics
Subject In charge	Dr. P M. Dandagi

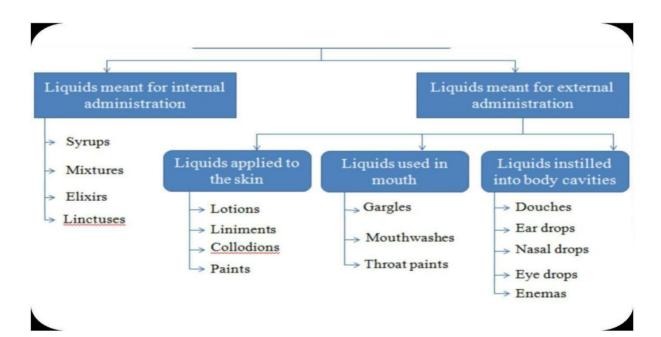

S I. No	Assigned Topics	Name of the Students	Reg. No.
1 Monophasic Liquid		Priyanka Marihal	NP0122016
	Dosage Form		
2	Monophasic Liquid	Sanghavi Deshpande	NP0122020
	Dosage Form	_	

p. M. Dandy

Subject Incharge: Dr. P M. Dandagi

Liquid Dosage form: Monophasic

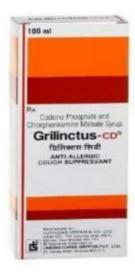

Liquids meant for internal administrations

Syrup : Aqueous preparations of 60% to 85% sucrose with or without flavoring agents and medicinal substances. e.g. Chlorpheniramine maleate syrup, Chloral hydrate .

Elixirs: Clear, aromatic, sweetened hydro alcoholic solutions with or without medicinal substances, intended for oral use. Eg: Dexamethasone elixir.

Linctuses: Viscous, liquid and oral preparations that are generally prescribed for the relief of cough. Eg: Codeine Linctus.

Market available Syrup/Elixir/ Linctus

Liquids meant for external administration Liquids used in the mouth

Gargles: Aqueous solutions containing antiseptics or antibiotics used to treat throat infections. Available in concentrated form with direction for dilution with warm water before use. eg: Povidone Iodine gargle.

Mouthwash: Aqueous solution with a pleasant taste and odor used to clean and deodorize the buccal cavity. Have antiseptic and astringent activity.eg: Antisepticsphenol derivatives.

Throat paints: Viscous liquid preparation used for mouth and throat infections. Eg: Phenol glycerin, Compound Iodine.

Market available Eye drop, Nasal drop and Enemas

Liquids meant for external administration Liquid meant for skin

Liniments: Oily liquid preparations, intended for external application with rubbing action to the affected area. Use to relief pain and stiffness, such as from muscles spasm and arthritis.

Lotions : Topical preparation with a low to medium viscosity. Use to moisturize dry skin. Eg: Calamine Lotion, baby lotion

Paints: Solutions used to sterilize the skin. Eg. Betadine antiseptic paint, Magenta paint

Market available Liniment, Lotion and Paint

NP0122026	VAISHNAVI BALIGADDI	26
NP0122027	VARSHA MALLAPPA MANGASULE	25

Assignments:

Buffer:

Role of buffer in complexometric titrations:

1) Consume the released protons from the reaction between metal and EDTA and so make the reaction go forward.

Metal + EDTA (metal-EDTA) complex + 2H+

Keep pH constant and so keep the correct color of the indicator.

\square Examples of buffers used:

1) Ammonia buffer (pH = 10)

Direct titrations:

Direct titration of metal sample \neq standard EDTA.

2. Back (Residual) titrations:

Metal sample + known excess of standard EDTA

Back titration of the remaining unreacted EDTA \neq standard metal solution.

3. Replacement (Substitution) titrations:

Metal sample + (Mg-EDTA) solution \square (metal-EDTA) + equivalent amount of Mg²⁺

 \downarrow

Titration ≠ standard EDTA.

4. Alkalimetric titrations:

Metal sample + EDTA solution (metal-EDTA) complex + 2H+

Acid-base indicators :

- ♦ They are indicators used to indicate the end point of acid-base titrations
- (i.e. indicate the completeness of the reaction by changing their colors).
- ♦ Each indicator has its specific {pH range} which is the range of pH within which the indicator changes its color.

Examples of acid-base indicators:

- 1. Methyl Orange (M.O.):
- \square pH range \approx (3 4.5) approximately.
- \square We use 2-3 drops of it in our experiments.

Color:

Condition	Possible Drug Combinations
Heart failure	Diuretic + beta-blocker + ACEI/ARB ± aldosterone blocker ± digoxir
Postmyocardial infarction	Aspirin, beta-blocker, ACEI/ARB, statin
Hypertension (>stage 1)	Combinations of at least 2 of the following agents: ACEI/ARB, CCB, diuretic, beta-blocker
Type 2 diabetes	Sulfonylurea, biguanide, aspirin, ACEL/ARB, statin
Hyperlipidemia	Statins ± ezetimibe or statins ± niacin
HIV	2 Nucleoside reverse transcriptase inhibitors + 1 protease inhibitor
Tuberculosis	Isoniazide, rifampin, pyrazinamide, ethambutol

ACEI = angiotensin-converting enzyme inhibitor; ARB = angiotensin II receptor blocker; CCB = calcium channel blocker.

Measures for enhanced learning for Advanced Learners

The advanced learner students were identified after IA1 and were informed about various options to enhance their learning. They were given information about importance, various self-learning resources, MOOC/NPTEL, personality development courses, Assignments, Seminars and present oral/poster presentations. Student were given support, encouraged and motivated to take one or other activity based on their interest and capability.

Details of Advanced Learners

Registration Number	Name of the Mentees	Marks obtained in IA-I (Marks more than 70%)	Total Number of Advanced Learners	Assignments Given /Paper or poster presentation/conferences attended/seminars /project works/any other activity etc

By Prof. Swagata Dasgupta | IIT Kharagour

Learners enrolled: 5087

ABOUT THE COURSE : This course is an introductory course that will focus on basic concepts in hinchemistry. The course reals with an understanting of hidrograf marromolecules: noteins

Summary

Course Status : Completed Course Type Duration : 12 weeks

Category * Chemistry

Credit Points:

Level : Undergraduate/Postgraduate

» Blasciences

Start Date: 24 Jan 2022 15 Apr 2022 07 Feb 2022 Enrollment Ends

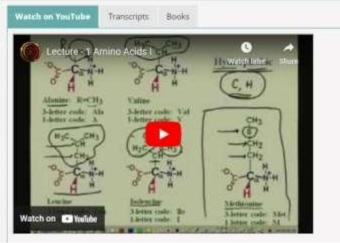

NPTEL

List of Slow Learner Students with Marks

Registration Number	Name of the Mentees	Marks obtained in IA-I	Marks obtained in IA- II	End Exam Marks
NP0121010	ISHAN TEWARI	11.00	21.00	64.00
NP0121026	SHARWIN D SOUZA	21.00	26.00	69.00

Details of Assignments Submitted

In order to improve learning, slow learners are given with assignments. After submitting by students they were evaluated.

Example:

SIGNS 2 SYMPTOMS

Signs & symptoms of hiposey vory
based on the inhuminimous of on
individual to M hipose. The WHO dossifies
deposey in to Pancibacillory (PB) and
Multibacillory (MB) heposey based on
the Number of Skin lesions and norm
involvement. However, within the WHO;
Simplified Classification, there
are be a faisly und source of patient
presentations.

* Pancibacillary 1cprosy (Two to five skin lesions with regating skin) succes results at all sites

Patrila cillary single lesion deprosy one skin lesion with regaline skin somer result

Multibereillary depositive (structure or spositive) (structure or spositive) (structure or spositive) (structure or spositive)

PHARM. D.

TUTORIAL BOOK

Name: Radhika Nadgendo. Roll No.: 16

Subject: The maceuplan Analysis. Reg. No.: NP0120016

Class : Pharm. D. 3 Year

Academic Year : 20<u>22</u> -2023

ASSICHMENT-1 what are the factors affecting electrical conductivity in a solution? Concentration of ions: conductivity of electrolytes Increase with increase in conce of ions, as there will be more charge carriers molar conductivity increases with a decrease in cone of solution. Nature of electrolyte: The degree of dissolution of electrolytes determines the conc. of ions is the solo and hence the conductioning of electrolytes. The degree of separation is directly proportional to electrical conductainty in a solution Temp: Affects the degree of which an electrolyte gets dissolved in a soll. Migher temp enhances the solubility of electrolytes in hence, the conc. of ions which results in inveased electrolyte conduction. size of ion: Electrical conductionty depends on size of ion. The greater the size, the lesser is the conductance, size of ion, is inversely proportions to conductance of ion. Type of solvent: Higher the polarity of solvent the higher the electrical conductivity. It is directly proportional to electrical conductivity.

filters / Monochromaton: the some of light gives ladioilin from avo-suonm. This is poly chromatic in nature. On colomnetry one require only monochromatic light Hence, filters of monochromatic is used to connect polychromatic light into monochromatic light. Filters are of 2 kinds: a) Absorption of filters: These filters are made up of grass coated with pignuts on they are made up of deed gelation They absorb unwanted radiation is transit the est of light or radiation which is reg. for coloninetry. 6) Inference filters: Also known as, fabry first filter: It has dielectric space film made up of caf. MgF2, sio between two parallel reflecting silver films. The thickness of dielectric film can be c) Monochromators: They are better of more efficient than fillers in converting polychromatic I heterochromatic light into monochromatic lights.

What is electrode potential ? write about reference & indicator electrode. The tendency of a metal to get midized or reduced when it is placed in sol of its own salts is called electrode potential Indicator electrode: It responds to changes in EMF or pt of soln. It is used to indicate the EMF or potential or pH of a solution. En Antimony electrode, glass electrode. Reference electrode: 9+ is one which has a standard potential on its own & its potential does not change to whichever solution it is dipped into-En: Saturated calonel electione & silver-silver Monde electrode. What is amperative titration? Write advantages & its applications. Amperometric titration refers to a dass of litration through measurement of electric current produced by the tituation reaction.

What are the foctors affecting electrical conductivity is tactors affecting electrical conductivity in solution are concentration: conductivity of electrolyter incre with an increase in concentration of ions as there will be more charge corriers. Molar conductivity increase with decrease in the concentration of the solution. Mature of electrolyte: The degree of dissociation quelection a determined the concudration of ions in the bolistion Seguration is directly proportional to electrical conductivity of electrolytes. The electrical conductivity of electrolytes and conductivity of electrolytes. iii) Temperature: Temperature affects the degree to which an electro gets dissolved in a solution. Higher temperature enhance the solubility of electrolytes and hune the concentration of ious which busyets in increased electrolytes conducted size of ious: - electrical conductivity depends on size of the (LV) Topy the greater the size grow the lesser in the conductiona. Size of ion it inversty projutional to the conduction of ioks Type of Solvent: - Higher the Jolarity of Solvent, the higher the electrical Conductivity. It is directly proportional to electrical conductivity.

Subject In charge	Mr. Sanjay Ugare

Remedial Measures for Advanced Learners

The advanced learner students in **Pharmacology-II** (**Theory**) were identified after IA1 and in order to enhance their learning they are given with following activities:

Preparation of Powerpoint Presentations on different topics of Pharmacology.

Details of Advance Learners:

Following students were identified as advanced learners in PHARMACOLOGY Theory subject after IA1 examination:

Registration Number	Name of The Mentees	Marks obtained in IA- I (Marks more than 70%)	Assignments Given /Paper or poster presentation/conferences attended/seminars /project works/any other activity etc
NP0120002	AYUSHI RAMESH DEVAGEKAR	23	Assignments (Preparation of power point)
NP0120005	SHREYA YASHWANTKAMBLE	27	Assignments (Preparation of power point)
NP0120008	MISBA ABDULKALAM HULIKATTI	24	Assignments (Preparation of power point)
NP0120011	POOJA RAMESH NADUVINAMANI	27	Assignments (Preparation of power point)
NP0120012	PRADNYA PRITAM RAJMANE	25	Assignments (Preparation of power point)
NP0120016	RADHIKA RAGHAVENDRA NADGOUDA	24	Assignments (Preparation of power point)
NP0120018	RAMETRIKA SAHA	22	Assignments (Preparation of power point)
NP0120019	RANJEETA MARUTI CHOUGALA	24	Assignments (Preparation of power point)
NP0120020	REHANBAIG SHAMSHIRBAIG JAMADAR	26	Assignments (Preparation of power point)
NP0120021	RIDDHI BHARAT PATEL	25	Assignments (Preparation of power point)
NP0120022	SAKSHI RAMKRISHNA DESAI	24	Assignments (Preparation of power point)
NP0120023	SARDA REVA RAMAKANT	24	Assignments (Preparation of power point)
NP0120025	SHREESHA B K	23	Assignments (Preparation of power point)
NP0120026	SHREYA SANTOSH MOTE	26	Assignments (Preparation of power point)
NP0120028	SPOORTI KONKANI	26	Assignments (Preparation of power point)
NP0120029	TANUJA MALLIKARJUN KHADABADI	24	Assignments (Preparation of power point)

Total Number of Advanced Learners: 16

Subject In charge:
Mr. Sanjay Ugare
Assistant Professor
Department of Pharmacology
KLE College of Pharmacy, Belagavi

LIST OF ASSIGNMENTS SUBMITTED BY ADVANCED LEARNERS

In order to enhance the learning students are given with assignments on below topics.

Reg. No.	Name of the Student	Title of the Assignment
NP0120002	AYUSHI RAMESH DEVAGEKAR	Diuretics
NP0120005	SHREYA YASHWANTKAMBLE	Pharmacology of the Endocrine System
NP0120008	MISBA ABDULKALAM HULIKATTI	Chemotherapy
NP0120011	POOJA RAMESH NADUVINAMANI	Immunopharmacology
NP0120012	PRADNYA PRITAM RAJMANE	Principles of Animal toxicology
NP0120016	RADHIKA RAGHAVENDRA NADGOUDA	The dynamic cell: The structures and functions of the components of the cell
NP0120018	RAMETRIKA SAHA	The Gene: Genome structure and function:
NP0120019	RANJEETA MARUTI CHOUGALA	Sulfonamides and co-trimoxazole
NP0120020	REHANBAIG SHAMSHIRBAIG JAMADAR	Antifungal antibiotics
NP0120021	RIDDHI BHARAT PATEL	Thrombolytics and antiplatelet agents
NP0120022	SAKSHI RAMKRISHNA DESAI	Chemotherapy of cancer (Neoplasms)
NP0120023	SARDA REVA RAMAKANT	Diuretics
NP0120025	SHREESHA B K	Anticoagulants
NP0120026	SHREYA SANTOSH MOTE	Cell and macromolecules: Cellular classification, subcellular organelles, macromolecules, large macromolecular assemblies
NP0120028	SPOORTI KONKANI	DNA replication: General, bacterial and eukaryotic DNA replication.
NP0120029	TANUJA MALLIKARJUN KHADABADI	The cell cycle: Restriction point, cell cycle regulators and modifiers.

Subject In charge:

KLE COLLEGE OF PHARMACY, VIDYANAGAR, HUBBALLI – 580031 GPAT COACHING – B PHARM IV Year 2022–23 TIME TABLE

Faculty Incharge- Ms Sushmita I H & Ms Pooja M Kognole

	Discussions	Time-12:00 to 1:00p
Sl.No.	Topic	Date
1	Pharmaceutics	02.01.2023
2	Pharmaceutical Organic Chemistry	10.01,2023
3	Pharmacology	11.01.2023
4	Pharmaceutical Analysis	18.01.2023
5	Pharmacognosy	20.01.2023
6	Biotechnology	30.01.2023
7	Microbiology	03.02.2023
8	Pharmaceutical Engineering	06.02.2023
9	Jurisprudence	14.02.2023
10	Hospital & Clinical Pharmacy	16.02.2023
11	Bio pharmaceutics and Pharmacokinetics	19.02.2023
12	Human Anatomy and Physiology	27.02.2023
13	Medicinal Chemistry	02.03.2023
14	Online Lecture on GPAT 2023 Self-study	05.03.2023
15	Pharmaceutical Inorganic Chemistry	12.03.2023
16	Physical Pharmacy	15.03.2023
17	Online lecture on Last one month GPAT Study guidelines	19.03.2023
18	Tips on GPAT Examination Guidelines	23.03.2023

Important Instructions

1. The NTA Score of a candidate indicates the percentage of candidates who have scored EQUAL TO OR BELOW (same or lower raw marks) that candidate in that session.

Other Backward Class (OBC-

2. The NTA scores of a Candidate have been calculated as follows:

100XNumber of candidates appeared in the 'Session' with raw score EQUAL TO OR LESS than the candidate

Total number of the candidates appeared in the 'Session'

NTA score is not the same as percentage of marks obtained.

3. A National Merit Ranking (All India Rank) has been arrived on the basis of NTA Score.

GEN-EWS

4. Candidates having same Score shall be listed in a chronological (ascending) order as per their date of birth.

NCL)

90.1695242 90.5716216

- 5. Candidates having same score would be given the same Merit, and the Merit number would be increased by the same number i.e. if there are two candidates at Merit 2, Merit 3 would not be awarded to the next candidate but Merit 4 would be given.
- 6. The admission authorities are advised to use score awarded to the students for allotment of seat in the AICTE approved programs along with the other criteria that may exist, as applicable.
- 7. Candidate's particulars including Category and Person with benchmark Disability(PwBD) have been indicated as mentioned by the candidate in the online application form.
- 8. Instances of incorrect information provided by the candidates, if detected at any stage, would make the candidate liable for disqualification.

		-1
		chemistry
		Carbonyl compound(Aldehydes and
		ketones) nucleophilic addition reaction.
		Acidity of carboxylic acid, effect of
		substituent s on acidity
		Aliphatic amines- basicity, effect of
		substituent s on basicity.
		SP3 hybridization in alkanes, stability of
		conjugated dienes.
		Markownikoff's orientation, free radical
		addition reactions of alkenes, anti
		Markownikoff's orientation.
I Year B. Pharm /	Biochemistry	Bio energetics overview
II semester		Biological significance of ATP and
		CAMP
		High energy compound and its
		classification
		Enzyme inhibitors
		Factors affecting enzyme action
		Urea cycle
		Glycolysis pathway
		Citric acid cycle
I Year B. Pharm /	Pathophysiology	Cell injury
II semester		Inflammation
		Infectious disease
		Cancer
		Pathophysiology of COPD
II Year B. Pharm /	Pharmaceutical Organic	Polynuclear hydrocarbons -naphthalene
III semester	chemistry - II	Polynuclear hydrocarbans -Phenantheone
	•	Polynuclear hydrocarbans -anthracone
		Cycloalkane- reactions
		Cycloalkanes baeyers strain theory
		Aromatic acids
		Benzene and its derivatives
		Reactions of benzene.
II Year B. Pharm /	Physical Pharmaceutics - I	Surface and inter-facial tensions
III semester	, -	Adsorption at solid interface
		Factors affecting solubility
		Diffusion
		Sorenson pH scale
		Refractive index
		Optical rotation
II Year B. Pharm /	Pharmaceutical	Bacterial growth curve
II I Cai D. I Hailii /	1 Harmaccutteat	Dacterial growni curve

KLE College of Pharmacy

(Re-Accredited by NAAC, NBA, Approved by -AICTE, PCI New Delhi)
[Declared as Deemed-to-be-University under section 3 of the UGC Act, 1956 vide Government of India Notification No. F.9-19/2000-U.3(A)]

P.B.No. 1062, 2nd Block, Rajajinagar, Bengaluru - 560 010, Karnataka, India.

III semester	Microbiology	Grams and acid fast staining
		Sterilization
		Laminar flow equipment
		Microbiological assay
		Spoilage
		Animal cell culture
II Year B. Pharm /	Pharmaceutical Engineering	Bernoculli's theory
III semester	Thannaceancar Engineering	Hammer nill, edge runner mill
		Cyclone spenutor air separator
		Distillation
		Evaporation
		Corrision and its prevention
		Heat transfer
II Year B. Pharm /	Medicinal chemistry - I	Physicochemical properties
IV semester	Wiediemai enemistry - 1	Drug metabolism
1 v Schliester		ANS- Agonist
		ANS - Antagonist
		Cholinergics- Agonist
		Cholinergic - antagonist, antipsychotic
		Sedatives-hypnotics
II Waan D Dlaama /	Disseries 1 Disserses services III	V 2
II Year B.Pharm / IV semester	Physical Pharmaceutics - II	Newton system, thixotropy Deformation of solids
I v semester		
		Optical, kinetics and electrical properties of collodals
		Particle size and size distribution
		Interfacial properties of suspended particles
		Stabilization of medicinal agents
		Stability and preservation of emusion
II Year B. Pharm /	Pharmacology - I	Parasympathmimtics, parasympatholytics
IV semester		CNS pharmacology
		General anaesthetics
		Sedatives/hypnotics
		Antiepileptics
		Pharmacology of CVS
II Year B. Pharm /	Pharmacognosy &	Defination, history scope and
IV semester	Phytochemistry - I	development of pharmacognosy
		Coganized and conorganized drugs
		Quality control of natuaral drugs
		Cultivation collection and processing of
		natural drugs
		Tissue culture edible vaccines

KLE College of Pharmacy

(Re-Accredited by NAAC, NBA, Approved by -AICTE, PCI New Delhi)

[Declared as Deemed-to-be-University under section 3 of the UGC Act, 1956 vide Government of India Notification No. F.9-19/2000-U.3(A)] P.B.No. 1062, 2nd Block, Rajajinagar, Bengaluru - 560 010, Karnataka, India.

		Various system of medicine
		Primary and secondary metabolities
III Year B. Pharm	Medicinal Chemistry II	Antihypertensives
/ V semester	•	Histamines and antihistamines
		Antineoplastics
		Antihyperlipedemic agents
		Hypoglycemic agents
		Steriods
III Year B. Pharm	Industrial Pharmacy - I	Tablets
/ V semester		Capsules
		Packing materials
III Year B. Pharm	Pharmacology II	CHF, antihypertensive, antianginal
/ V semester		Diuretucs and antidiuretics
		PG, NSAIDS, 5HT, histamines
		Insulin, oral hypoglycemic agents
		Estrogen, progesteron, oral contraceptives
		Principles and applications of bioassay
III Year B. Pharm	Pharmacognosy &	Pathways- shikimic, acetate amino acid
/ V semester	Phytochemistry - II	pathway
		Alkaloids-chemistry, classification
		Steriods, cardiac glycosides- composition
		chemicals.
		Tannins - chemistry, benzoin
		Spectroscopy, chromalogy
		Isolation of atropine concetration
		Isolation of rutein, quinine
III Year B. Pharm	Pharmaceutical	Drug and cosmetic act
/ V semester	Jurisprudence	Drug and cosmetic act
		Pharmacy counsel of India
		Narcotrophic and psychotropic substance
		act
		Drugs and magic remedies act
		MTP, CPCSEA guidlines
III Year B. Pharm/	Medicinal chemistry - III	Synthetic anti TB agents
VI semester		Urinary tract anti infectives
		SAR of quinolones, anti-viral agents
		Antifungal agents
		Antiprotozoal agents
		Sulfonamides-chemistry and SAR
III Year B. Pharm/	Pharmacology - III	Basic chemotherapy
VI semester		Chemotherapeutic drug action
		chemotherapy

KLE College of Pharmacy

		Immunosuppresants and
		immunomodulators
		Drug acting on immunomodulators
		Antimicrobial drug pharmacology
III Year B. Pharm/	Disabamas sorting and	<u> </u>
VI semester	Biopharmaceutics and Pharmacokinetics	absorption
V1 semester	Filarmacokinetics	Factors affecting absorption
		Distribution
		Pharmacokinetics
		Non linear pharmacokinetics
III Year B. Pharm/	Herbal Drug Technology	Indian system of medicine
VI semester		Good agriculture practice
		Nutraceuticals
		WHO and ICH Guidelines
		Schedule T, Schedule Y
III Year B. Pharm/	Pharmaceutical	Enzyme immobilization
VI semester	Biotechnology	Biosensors
		Recommbinate bio technology
		Cloning vectors
		Immunity and its types
		Mutation and its types
		Immune blotting technology
III Year B. Pharm/	Quality Assurance	GLP
VI semester	•	NABL
		QbD
IV Year B. Pharm/	Pharmaceutical Organic	Sterioisomerism and optical isomerism
VII semester	chemistry - III	Geometrical isomerism
	•	Nomenclature of hetero cyclic
		compounds
IV Year B. Pharm/	Instrumental Methods of	Pilot plant scale up
VII semester	Analysis	Transfer of technology
	ž	SUPAC guidelines
		NDA drug
		Total quality management
		IRA
IV Year B. Pharm/	Industrial Pharmacy II	UV Visible spectroscopy
VII semester	11100001101 1 110111100 9 11	High performance liquid chromatography
		Gas chromatography
		Paper chromatography
		IR spectroscopy
		Flame photometry
		Ion exchange chromatography
IV Year B. Pharm/	Pharmacy Practice	PTC
IV Year B. Pharm/	Pharmacy Practice	PIC

(Re-Accredited by NAAC, NBA, Approved by -AICTE, PCI New Delhi)

[Declared as Deemed-to-be-University under section 3 of the UGC Act, 1956 vide Government of India Notification No. F.9-19/2000-U.3(A)] $P.B.No.\ 1062,\ 2^{nd}\ Block,\ Rajajinagar,\ Bengaluru\ -\ 560\ 010,\ Karnataka,\ India.$

VII semester		Invantant control
VII semester		Inventory control
		Medication adherence
		Drug utilization review
		Hospital pharmacy organization
		Community pharmacy management
		Investigational new drug
IV Year B. Pharm/	Novel Drug Delivery	Ocular and transdermal DDS
VII semester	System	polymers
		Impantable DDS
		microencapsulation
		Transdermal DDS
		Gastroretentive DDS
		Intrauterine DDS
IV Year B. Pharm/	Biostatistics and Research	Observational studies
VIII semester	Methodology	Sample size calculation
VIII SSIIISSSI	wie die de legy	Review litrature
		Interventional studies
IV Year B. Pharm/	Social & Preventive	Concept of health and disease
VIII semester	Pharmacy	Preventive medicare
VIII semester	1 narmae y	
		National health programme
		Community services in rural health
		Sociology and health
		Malnutrition and prevention
77.77 D DI /	71	Hygiene and health
IV Year B. Pharm/	Pharmaceutical Marketing	Marketing introduction
VIII semester	Management	Marketing segmentation
		Product life cycle
		Distribution channel
		Emerging concept of marketing
		PSR
IV Year B. Pharm/	Pharmaceutical Regulatory	CDSCO
VIII semester	Sciences	Orange book
		Registration drug in overseas market
IV Year B. Pharm/	Pharmacovigilance	ICH Organization and objectives
VIII semester		Periodic safety update reports
		PV planning
		Pre clinical phase
		Clinical phase
IV Year B. Pharm/	Cosmetic science	Classification od cosmetic science
VIII semester	Cosmone Belefice	Quasi+ OTC drugs
VIII Somester		Face wash, moisturizing cream
		Conditioning shampoo, anti dandruff
		Sun protection
		Sun protection

CIRCULAR

To respective faculty,

Find below the Time Table for conducting Remedial classes for 2nd, 4th, 6th, 8th semester B.Pharm. (Jan -June 2023) identify the Slow learners in your subject as per the PROFORMA and conduct Remedial classes accordingly.

SEMESTER	DAY	TIME
	MONDAY	4.15 - 4.45PM
	TUESDAY	4.15 - 4.45PM
I SEM	WEDNESDAY	4.15 - 4.45PM
	THURSDAY	4.15 - 4.45PM
	FRIDAY	4.15 - 4.45PM
	SATURDAY	1.15 - 2.00PM

SEMESTER	DAY	TIME
	MONDAY	4.15 - 4.45PM
	TUESDAY	4.15 - 4.45PM
III SEM	WEDNESDAY	4.15 - 4.45PM
	THURSDAY	4.15 - 4.45PM
	FRIDAY	4.15 - 4.45PM
	SATURDAY	1.15 - 2.00PM

SEMESTER	DAY	TIME
	MONDAY	4.15 - 4.45PM
	TUESDAY	4.15 - 4.45PM
V SEM	WEDNESDAY	4.15 - 4.45PM
	THURSDAY	4.15 - 4.45PM
	FRIDAY	4.15 - 4.45PM
	SATURDAY	1.15 - 2.00PM

SEMESTER	DAY	TIME
	MONDAY	4.15 - 4.45PM
	TUESDAY	4.15 - 4.45PM
VII SEM	WEDNESDAY	4.15 - 4.45PM
	THURSDAY	4.15 - 4.45PM
	FRIDAY	4.15 - 4.45PM
	SATURDAY	1.15 - 2.00PM

Diazotization

What is Diazotization?

- The chemical process used in converting a primary aromatic amine into the corresponding diazonium salt of the amine is commonly referred to as diazotization.
- The German industrial chemist Peter Griess was the first person to report such a reaction in 1858. He went on to discover many more reactions involving diazonium salts.
- Generally, the preparation of these diazonium salts involves the reaction of an aromatic amine with nitrous acid in the presence of another acid. An example of a diazotization reaction is given below.

KLE COLLEGE OF PHARMACY,
BENGALURU-10

THEORY OF INDICATORS:

An indicator is a substance which is used to determine the end point in a titration. In acid-base titrations, organic substances (weak acids or weak bases) are generally used as indicators. They change their colour within a certain pH range. The colour change and the pH range of some common indicators are tabulated below:

Indicator	pH range	Colour change	
Methyl orange	3.2-4.5	Pink to yellow	
Methyl red	4.4-6.5	Red to yellow	
Litmus	5.5-7.5	Red to blue	
Phenol red	6.8-8.4	Yellow to red	
Phenolphthalein	8.3-10.5	Colourless to pink

ABSTRACT

Children with cystic fibrosis are commonly colonized with multi-resistant bacteria. In such patients, infectious exacerbation may require salvage therapy with uncommonly used antimicrobials, including chloramphenicol. Chloramphenicol is rarely used nowadays because of the associated severe adverse events. We describe the case of a 15-year-old female with terminal cystic fibrosis who required intravenous (IV) chloramphenicol treatment for a *Burkholderia cepacia* (*B. cepacia*) exacerbation. The child subsequently developed lactic acidosis and secondary respiratory compensation adding to her baseline respiratory distress. Based on the Naranjo scale, the probability of chloramphenicol being the cause of the hyperlactatemia and associated respiratory distress was rated as probable, as the adverse effects resolved upon discontinuation of the drug. Subsequent genotyping for mitochondrial polymorphism (G3010A) confirmed a possible susceptibility to lactic acidosis from mitochondrial RNA-inhibiting agents such as chloramphenicol. Hyperlactatemia is a rare but life threatening adverse effect that has been previously reported with chloramphenicol exposure, but is not generally thought of.

Clinicians should be aware of this potentially life threatening, but reversible adverse event. Lactate should be monitored under chloramphenical and it should be discontinued as soon as this complication is suspected, especially in patients with low respiratory reserve.

Key Words: cystic fibrosis, multi-resistant bacterial infection, lactic acidosis, mitochondria, chloramphenicol

BACKGROUND

Cystic fibrosis is a chronic and progressively deteriorating disease affecting multiple organ systems with high morbidity. Most commonly, the lungs are very affected and patients experience repeated lung infections. As patients age and are exposed to multiple antibiotic therapies, their lower respiratory tract becomes colonized with multi-resistant pathogens. Treatment of infectious exacerbations can therefore require regimens that include multiple toxicities include grey baby syndrome and medullary aplasia. 1-3

This toxicity profile likely results from the inhibition of mitochondrial protein synthesis, which leads to respiratory chain protein insufficiency and eventual oxidative phosphorylation dysfunction.²⁻⁶ This toxic phenomenon can result in hyperlactatemia and associated metabolic acidosis.²⁻⁶ Inhibition of mitochondrial protein synthesis with lactic acidosis, medullar toxicity and peripheral neuropathy has been previously reported with linezolid, which shares pharmacological

Abstract

Rationale: Adverse drug reactions (ADRs) represent a major health problem worldwide, with high morbidity and mortality rates, ranging from 0.5% to 16.8% in hospitalized children. One of the most effective and widely used drugs for anti-tuberculosis treatment is Isoniazid (INH). INH is a pro-drug and following oxidative activation, forms an adduct with NAD+ that inhibits NADH-dependent targets of Mycobacterium tuberculosis. Although this regimen is effective in treating active tuberculosis, it is associated with many ADRs considered as the main complication during therapy

Patient concerns: The patient, a 14-year-old girl, presented with nodal tuberculosis exhibiting mobile laterocervical and anglemandibular lymphadenopathy

Diagnoses: INH plasmatic concentration levels above the therapeutic range and a custom NGS gene panel including *NAT2* gene allowed the identification of the NAT2*5C/*6B slow metabolizer haplotype

Interventions: The Patient was hospitalized and initially treated with quadruple antituberculosis therapy. After treatment, she was not able to continue the anti-tuberculosis treatment owing to ADR including overwhelming vomiting, nausea, worsening of clinical conditions, and hypertransaminasemia.

Outcomes: Isoniazid and Rifampicin dosage was halved and then, because of the further increase of transaminases, antituberculosis therapy was suspended. Clinical conditions and hematic parameters rapidly improved after suspension of antituberculosis drugs

Lessons: We report a 14-year-old girl with defective NAT2 that showed ADRs during anti-tuberculosis therapy. Combined strategy of therapeutic drug monitoring and pharmacogenetic analysis should be widely adopted during the routine clinical practice in order to optimize therapy and minimize ADRs

Abbreviations: ADRs = adverse drug reactions, INH = isoniazid, TB = tuberculosis, TDM = therapeutic drug monitoring.

Keywords: adverse drug reactions, isoniazid, Pharmacogenetics, therapeutic drug monitoring

Introduction: Encephalopathy is a rare disease caused by adverse effects of antibiotic drugs such as metronidazole. The incidence of metronidazole-induced encephalopathy is unknown, although several previous studies have addressed metronidazole neurotoxicity. Here, we report the case of a patient with reversible cerebellar dysfunction on magnetic resonance imaging, induced by prolonged administration of metronidazole for the treatment of infectious colitis.

Case presentation: A 71-year-old Asian man, admitted to our hospital with hematochezia, underwent Hartmann's operation for the treatment of colorectal cancer three years ago. He was diagnosed with an infectious colitis by colonoscopy. After taking metronidazole, he showed drowsiness and slow response to verbal commands. Brain magnetic resonance imaging showed obvious bilateral symmetric hyperintensities within his dentate nucleus, tectal region of the cerebellum, and splenium of corpus callosum in T2-weighted images and fluid attenuated inversion recovery images. Our patient's clinical presentation and magnetic resonance images were thought to be most consistent with metronidazole toxicity. Therefore, we discontinued metronidazole, and his cerebellar syndrome resolved. Follow-up magnetic resonance imaging examinations showed complete resolution of previously noted signal changes.

Conclusion: Metronidazole may produce neurologic side effects such as cerebellar syndrome, and encephalopathy in rare cases. We show that metronidazole-induced encephalopathy can be reversed after cessation of the drug. Consequently, careful consideration should be given to patients presenting with complaints of neurologic disorder after the initiation of metronidazole therapy.

Introduction

Metronidazole is a commonly used antibiotic agent in various conditions such as anaerobic bacterial infections, protozoa infections (for example, giardiasis), *Helicobac*-

Case presentation

A 71-year-old Asian man, admitted with hematochezia, had previously been diagnosed with type 2 diabetes and underwent Hartmann's operation for the treatment of

INTRODUCTION

uberculosis is the most prevalent infectious disease worldwide, including in India. A blood clot forms inside a blood vessel, restricting blood flow through the circulatory system. Deep Vein Thrombosis is caused by inherited or hereditary causes, as well as acquired variables. In the absence of genetic causes, a case of unprovoked thrombosis indicates that severe pulmonary thromboembolism can be worsened by venous thromboembolism. This isn't true in all cases.

Provisional hypothesis for occurrence can be:

- Tuberculosis involves the hematological system and causes anemia, leucopenia, raised levels of plasma fibrinogen and factor VIII, and a downturn of antithrombin III and protein c levels.
- Local compression of veins by enlarged lymph nodes.

CASE REPORT

A male patient aged 31 presented to the emergency department with swelling of the left foot and lower limb for 10 days, the pain of the left lower limb. The patient had a past medical history of pulmonary tuberculosis for five months. He was using ATT drugs under RNTCP which includes Isoniazid, Rifampicin, Pyrazinamide, Ethambutol. He had no history of recent surgeries. He noticed swelling of the left lower limb after initiation of ATT.

General physical examination revealed poorly built malnourished men weighing 49kg. He was afebrile, pulse rate was 80bpm blood pressure 120/70mmhg. His respiratory rate was 20 with oxygen saturation of 95% on room air and grade 3 clubbing was noted on day-3. Lower limb examination revealed stiffness in the left calf and pain, redness, or tenderness. Cardiovascular and abdominal examination was normal

Laboratory findings on admission revealed low hemoglobin 7.9gm%, normal WBC count, and platelet count (9,110/cu mm, 2,45,000/cu mm). Plasma fibrinogen, Renal function tests, Liver function tests were normal. Thyroid-stimulating hormone (TSH) 2.33mIU/L, free T₄ - 13.1pmol/L was found to be normal. On examination for

LIST OF ADVANCED LEARNERS BPT 1ST YEAR FOR THE YEAR 2022-23

REG.NO	STUDENT NAME	DEPARTMENTS						
LA0222007	Bhagyaratna Kulkarni	Biochemistry,						
LA0222007	Briagyaratria Kulkarrii	Biomechanics, Physiology						
LA0222014	Harbin Kaur	Anatomy,						
	Harbiii Kaui	Biomechanics, Physiology						
LA0222022	MrunaliBednekar	Biochemistry,						
	WildridiiBedriekdi	Biomechanics, Physiology						
LA0222033	Shareen Luis	Anatomy, Biochemistry,						
LAU222033	Shareen Luis	Biomechanics, Physiology						

PRINCIPAL
KAHER'S KLE College of Physiotherapy
Kotgondhushi, HUBBALLI-28.

EFFECTS OF AGE & INJURY ON KNEE JOINT

Presented by: Shareen LUIS
I year BPT

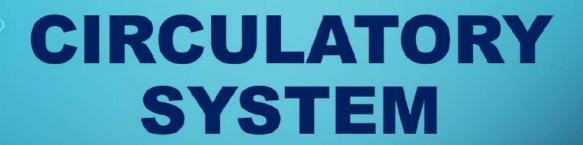

GENE THERAPY

PRESENTED BY: SHAREEN LUIS
I YEAR BPT

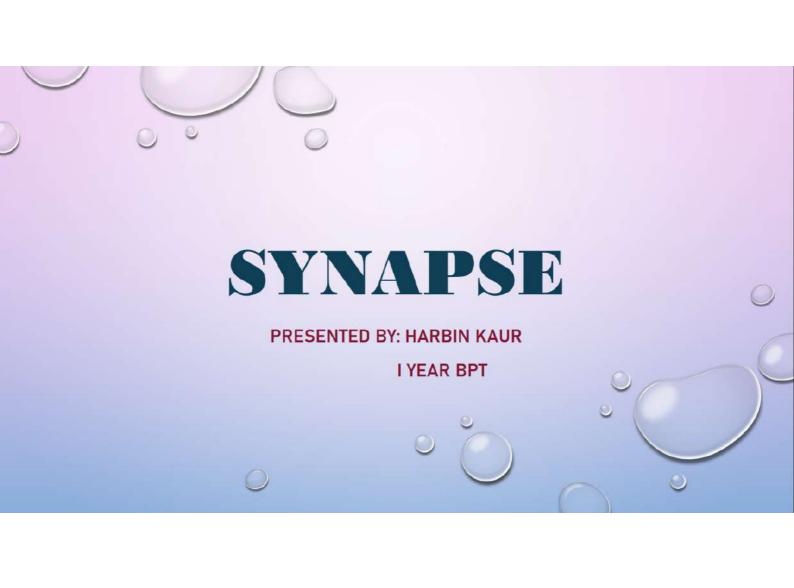

Presented by: Shareen LUIS

I year BPT

PRESENTED BY: SHAREEN LUIS
I YEAR BPT

Presented by: Mrunali Pedekar I year BPT

Presented by: Mrunali Pedekar I year BPT

Presented by: Habrin Kaur I year BPT

Presented by: Shareen Luis BPT, 1st year Student
